

THE SOLUTION BOOK

MY AI LANDSCAPE REPORT

One worked build — follow along.

One fully worked example, so you can see what “finished” looks like — a clear map of the AI tools that matter in your field, and how Claude compares.

YOU'LL USE THESE SIX THINGS

Claude

Perplexity

NotebookLM

Hugging Face

Projects

Artifacts

WHAT, WHY, WHERE, WHEN & HOW

Before we build, here's the whole assignment in five plain-English lines.

WHAT

You research and document **12 AI tools across 6 categories** that matter in your field. For each tool: what it does, how it works (high level), who it's best for, and how Claude compares — plus one **surprising use case** per category.

WHY

So you stop feeling lost in the AI noise. You'll know exactly which tool to reach for, and why — the shift from *AI Curious* to *AI Aware*.

WHERE

Research with **Claude, Perplexity, NotebookLM** (and Hugging Face for models); keep your notes in a **Project**; build the report as an **Artifact** or a Notion page.

WHEN

Do it once now (about 60–75 minutes). It becomes your reference — and feeds Week 2, where you connect these tools into your Claude workspace.

HOW

Pick 6 categories for your field → 2 tools each (12 total) → for each write **What / How / Who / vs Claude** → add one surprising use case per category → assemble as a shareable PDF or Notion doc, with sources.

YOUR TOOLBOX

Six things live inside Claude. Here are the first three — the set-up tools.

Customize

[Left strip → Customize](#)

The settings room. This is where you switch apps and skills on.

- 1 Click **Customize** in the left strip.
- 2 You'll see **Connectors** (your apps) and **Skills** (your saved tricks).
- 3 Turn things on here first, then use them in a chat.

Like this — Like the settings menu in a video game — you set things up before you play.

Connectors

[Customize → Connectors](#)

A plug that lets Claude see ONE of your apps, like your Calendar or email.

- 1 Customize → **Connectors** → tap +.
- 2 Find your app, tap **Connect**, sign in and tap **Allow**.
- 3 In a chat, tap + → Connectors → switch it **on** for that chat.

Like this — Like plugging a lamp into the wall. Plug in once; flick the switch when you want light. (Claude never sees your password.)

Skills

[Type / in the chat](#)

A saved instruction you call by name. The name IS the command.

- 1 To use one, type / then its name, e.g. **/meeting-notes**.
- 2 To make one, ask Claude to “save this as a skill” and give it a short name.
- 3 Now you can call that trick any time with /.

Like this — Like a cheat-code you type to instantly do a trick, instead of explaining it every time.

YOUR TOOLBOX — PART 2

And the three you build *with* — a **Project** to hold your research and an **Artifact** to build the report itself.

Projects

Left strip → Projects

A folder that remembers. Everything inside shares the same memory.

- 1 Left strip → **Projects** → **New project** → name it “My Workflow Map”.
- 2 Add notes or files with **Upload**; turn on the connectors you need.
- 3 Do all your assignment chats *inside* the project so nothing is forgotten.

Like this — Like a school binder for one subject — all the right pages in one place.

Artifacts

Appears on the right when Claude builds

The thing Claude makes that you keep — a doc, a table, a little app, or your map.

- 1 Ask Claude to “make this as an Artifact.”
- 2 It opens on the right — you can edit it and it saves.
- 3 Your finished workflow map will be an Artifact.

Like this — Like your finished drawing you pin on the wall — a real thing you can keep and show.

Scheduled

Left strip → Scheduled

Jobs on a timer that run all by themselves.

- 1 Left strip → **Scheduled** → **New task**.
- 2 Say the job in plain words and pick how often (daily / weekly).
- 3 To stop it later: Scheduled → **Pause** or delete.

Like this — Like an alarm clock, but for tasks — it wakes up and does the job without you.

CONNECT TWO APPS (EXAMPLES)

A connector plugs one of your apps into Claude. Two that help you research and ship this report:

Google Drive

So Claude can pull in your notes and sources, and save the finished report where you keep your work.

- 1 Customize → Connectors → + → find **Google Drive** → **Connect**.
- 2 Sign in and tap **Allow**.
- 3 In a chat: + → Connectors → turn **Drive** on.
- 4 Try it: “Save my tool notes as a doc in Drive.”

Notion

So Claude can write your report straight into a Notion page you can share as your submission.

- 1 Customize → Connectors → + → find **Notion** → **Connect** → **Allow**.
- 2 Pick the pages Claude may use.
- 3 In a chat: + → Connectors → turn **Notion** on.
- 4 Try it: “Draft my AI Landscape Report into a new Notion page.”

Safety — Claude never sees your password, and it never changes or shares a doc until you've read it and said yes.

USE TWO SKILLS (EXAMPLES)

A skill is a saved rule-set you call with /. These two make the research fast and consistent — every tool card comes out the same shape.

/tool-teardown

Researches one tool into the same card every time — what, how, who, and how Claude compares.

- 1 Ask Claude: "Save this as a skill called tool-teardown."
- 2 Give it the card shape (What / How / Who / vs Claude + a source).
- 3 Type **/tool-teardown** and name a tool.
- 4 You get a clean, sourced tool card.

/report-format

Groups all your tool cards into the 6-category report layout, ready to share.

- 1 Save it with your report structure (6 categories, a surprising use case each).
- 2 Type **/report-format** and paste your cards.
- 3 You get a tidy, shareable report.
- 4 It won't invent tools — gaps are flagged for you to fill.

Tip — No skill yet? Ask Claude: "Save this as a skill called tool-teardown." Next time, **/tool-teardown** runs it. The name IS the command.

BREAK DOWN EACH TOOL

Every tool in your report gets the same four-part card. Fill these and the tool is done — plus one *surprising use case* for the category.

WHAT

What the tool does, in one plain line.

HOW

How it works at a high level — no jargon.

WHO

Who it's best for.

VS CLAUDE

How Claude compares for the same job.

A worked card (example)

Tool: Perplexity — category: Research. **What:** an AI answer engine that searches the live web and replies with citations.

How: it runs your question as a search, reads the top sources, and writes a short answer with links — so you can check it.

Who: anyone who needs current, sourced answers fast — students, analysts, founders. **vs Claude:** Claude reasons, remembers your project, and writes better; Perplexity is stronger for quick live, cited lookups — many people gather with Perplexity, then think and write with Claude. **Surprising use case (Research):** paste a company name and ask for its last 3 funding rounds with sources — a 20-minute dig in 20 seconds.

RESEARCH THE **STAR** WAY

Each research step is a prompt. Good prompts follow **STAR** — Situation, Task, Action, Result. Here are the three you'll run.

S**Situation**

What's going on.

T**Task**

The one job.

A**Action**

The rules.

R**Result**

What you want back.

Tool teardown

- S** I'm researching AI tools for my field.
- T** Break down one tool.
- A** Using Perplexity / official docs, give what, how, who, and vs-Claude in 1–2 lines each; cite a source; never invent a feature.
- R** A clean tool card I can drop into my report.

Category compare

- S** I have two tools in one category.
- T** Compare them.
- A** A 3-row table — best-for, cost, the catch; flag one surprising use case; from sources only.
- R** A short comparison table.

Report assembly

- S** I have 12 tool cards.
- T** Assemble the report.
- A** Group into 6 categories, add a 1-line intro and a surprising use case each; keep it shareable; keep sources.
- R** A structured report (PDF or Notion).

YOUR AI LANDSCAPE REPORT

This is what you hand in — a shareable map of your field's AI tools. Tick each ingredient.

**6 categories**

relevant to your field

e.g. Research · Writing · Image · Data · Automation · Build

**12 tool cards**

2 per category — what / how /
who / vs Claude

Perplexity, NotebookLM, Claude, Midjourney, ... (12)

**6 surprising use cases**

one per category

The non-obvious win for each category

**Shareable + sourced**

a PDF or Notion doc

Clean, linkable, every claim has a source

EVERY TOOL CARD ANSWERS

1. What it does + how it works (high level)
2. Who it's best for
3. How Claude compares — fairly

WHAT TO SUBMIT

A structured, shareable **PDF or Notion document** — 6 categories, 12 tool cards, a surprising use case per category, with sources. This is your **Week 1 deliverable** (feeds Week 2).

NOW BUILD IT IN CLAUDE

Here's the order to build your own landscape report.

- 1 Pick **6 categories** that matter in *your* field.
- 2 Choose **2 tools** per category (12 total).
- 3 Research each with **Perplexity / official docs**; fill What / How / Who / vs Claude.
- 4 Add one **surprising use case** per category.
- 5 Assemble as a shareable **PDF or Notion** doc (build it as an Artifact); keep your sources.

WHAT GOOD LOOKS LIKE — GRADING

- ✓ **6 categories** that genuinely matter in the learner's field.
- ✓ **12 tools** (2 per category), each with what / how / who / vs-Claude.
- ✓ One **surprising use case** per category (6 total).
- ✓ **Real sources** — nothing invented; Claude compared fairly.
- ✓ A **shareable** PDF or Notion doc.

YOU'RE DONE WHEN

- ☐ 6 categories, 12 tool cards, all four fields on each.
- ☐ A surprising use case per category, with sources.
- ☐ One shareable PDF or Notion document.

COMMON MISSES TO FLAG

- ✗ Generic categories not tied to their field.
- ✗ Cards missing "how it works" or the Claude comparison.
- ✗ No sources, or invented features.
- ✗ No surprising use cases.

That's your map of the AI landscape — you now know which tool to reach for, and why. It feeds straight into Week 2.

menler

Your learning point in the AI era.
