

THE SOLUTION BOOK

MY CLAUDE OS

One worked build – follow along.

One fully worked example, so you can see what a finished *Claude OS* looks like — Projects, prompts, a connector, a schedule, a plugin and a routine, all wired together.

YOU'LL USE THESE SIX THINGS

Projects

System prompts

Connectors

Schedules

Plugins

Routines

WHAT, WHY, WHERE, WHEN & HOW

Before we build, here's the whole assignment in five plain-English lines.

WHAT

You configure your whole personal **Claude OS** — **3 Projects** (work, research, creative), the **Notion** connector live, **3 system prompts**, **1 Schedule** running, **1 Plugin** installed, and **1 Routine** that chains 3+ steps — then document it.

WHY

So Claude stops being a blank chat and becomes *your* set-up workspace. This is the shift from **AI Aware** to **Claude Native**.

WHERE

All in Claude: Projects & system prompts in **Projects**; the connector & plugin in **Customize**; the Schedule & Routine in **Scheduled**. Your walkthrough lives in Notion.

WHEN

One 75–90 minute build. It becomes your daily environment — and feeds Week 3, where every prompting framework runs inside it.

HOW

Build 3 Projects, each with its own system prompt → turn on the **Notion** connector → set 1 **Schedule** → install 1 **Plugin** → build 1 **Routine** chaining 3+ steps → document every part with screenshots and say why.

YOUR TOOLBOX

Six things live inside Claude. Here are the first three — the set-up tools.

Customize

[Left strip → Customize](#)

The settings room. This is where you switch apps and skills on.

- 1 Click **Customize** in the left strip.
- 2 You'll see **Connectors** (your apps) and **Skills** (your saved tricks).
- 3 Turn things on here first, then use them in a chat.

Like this — Like the settings menu in a video game — you set things up before you play.

Connectors

[Customize → Connectors](#)

A plug that lets Claude see ONE of your apps, like your Calendar or email.

- 1 Customize → **Connectors** → tap +.
- 2 Find your app, tap **Connect**, sign in and tap **Allow**.
- 3 In a chat, tap + → Connectors → switch it **on** for that chat.

Like this — Like plugging a lamp into the wall. Plug in once; flick the switch when you want light. (Claude never sees your password.)

Skills

[Type / in the chat](#)

A saved instruction you call by name. The name IS the command.

- 1 To use one, type / then its name, e.g. **/meeting-notes**.
- 2 To make one, ask Claude to “save this as a skill” and give it a short name.
- 3 Now you can call that trick any time with /.

Like this — Like a cheat-code you type to instantly do a trick, instead of explaining it every time.

YOUR TOOLBOX — PART 2

And the three you build *with* — this whole assignment lives in **Projects**, **Scheduled**, and everything in **Customize**.

Projects

Left strip → Projects

A folder that remembers. Everything inside shares the same memory.

- 1 Left strip → **Projects** → **New project** → name it “My Workflow Map”.
- 2 Add notes or files with **Upload**; turn on the connectors you need.
- 3 Do all your assignment chats *inside* the project so nothing is forgotten.

Like this — Like a school binder for one subject — all the right pages in one place.

Artifacts

Appears on the right when Claude builds

The thing Claude makes that you keep — a doc, a table, a little app, or your map.

- 1 Ask Claude to “make this as an Artifact.”
- 2 It opens on the right — you can edit it and it saves.
- 3 Your finished workflow map will be an Artifact.

Like this — Like your finished drawing you pin on the wall — a real thing you can keep and show.

Scheduled

Left strip → Scheduled

Jobs on a timer that run all by themselves.

- 1 Left strip → **Scheduled** → **New task**.
- 2 Say the job in plain words and pick how often (daily / weekly).
- 3 To stop it later: Scheduled → **Pause** or delete.

Like this — Like an alarm clock, but for tasks — it wakes up and does the job without you.

CONNECT TWO APPS (EXAMPLES)

A connector plugs one of your apps into Claude. This assignment *requires* Notion; Drive is a great second.

Notion

Required here — so Claude can read and write your Notion, where your OS walkthrough (Milestone Project 1) lives.

- 1 Customize → Connectors → + → find **Notion** → **Connect** → **Allow**.
- 2 Pick the pages Claude may use.
- 3 In a chat: + → Connectors → turn **Notion** on.
- 4 Try it: “Write my Claude OS walkthrough into a new Notion page.”

Google Drive

So your Projects can pull in your real documents as knowledge.

- 1 Customize → Connectors → + → find **Google Drive** → **Connect**.
- 2 Sign in and tap **Allow**.
- 3 In a Project: + → Connectors → turn **Drive** on.
- 4 Try it: “Use my files in Drive as this Project’s knowledge.”

Safety — Claude never sees your password, and it never writes or shares a page until you’ve read it and said yes.

USE TWO SKILLS (EXAMPLES)

A skill is a saved rule-set you call with /. Attach one to a Project; use one inside your Routine.

/house-style

Your writing rules — tone, format, banned words. Attach it to your work and creative Projects.

- 1 Ask Claude: "Save my writing rules as a skill called house-style."
- 2 Give it 5–8 clear rules.
- 3 In a Project, type **/house-style** before a writing task.
- 4 Every draft comes out on-brand.

/daily-brief

Turns your inputs into a fixed morning brief — perfect as a step inside your Schedule or Routine.

- 1 Save it with the output shape (focus, risks, first task).
- 2 Type **/daily-brief** and paste your calendar + goals.
- 3 You get the same Today card each time.
- 4 Drop it into a Schedule to run daily.

Tip — No skill yet? Ask Claude: "Save this as a skill called house-style." Next time, **/house-style** runs it. The name IS the command.

WRITE YOUR SYSTEM PROMPTS

You need **3** — one per Project (work, research, creative). Each covers the same four parts and tells Claude who it is before you ask.

WHO

Who Claude is and who it works for.

DOMAIN

The field this Project covers.

FORMAT

The default shape of answers.

NEVER

The hard lines it must not cross.

A worked prompt — the “Work” Project (≈120 words)

You are my work assistant for running a small design studio. **Domain:** client projects, proposals, and status updates in branding & web. **Format:** crisp and professional; for updates give a 3-line status + next steps; for proposals give scope, timeline, price ranges; for email give subject + body. **Knowledge:** use the client list and rate card I’ve uploaded as the source of truth for names, scope and prices — never invent a client, date or figure. **Never:** never promise a deadline I haven’t confirmed, never quote a price outside the rate card, and never send anything — draft only, I send. When unsure, ask me one question first.

RUN IT THE STAR WAY

Your Routine chains 3+ steps, and each Project runs real tasks. Write each as a **STAR** prompt — the Routine's Action lists its chain.

S**Situation**

What's going on.

T**Task**

The one job.

A**Action**

The rules / the chain.

R**Result**

What you want back.

Routine · weekly review (3-step chain)

- S** Every Friday I review my week.
- T** Run my weekly review.
- A** Step 1: pull my done-list; Step 2: summarise wins + misses; Step 3: draft next week's top 3 — same shape each week, invent nothing.
- R** A Friday review card.

Work Project task

- S** A client asked for a project update.
- T** Draft the update.
- A** Use the client list + /house-style; 3-line status + next steps; draft only, I send.
- R** A ready-to-check email.

Research Project task

- S** I need a quick briefing on a topic.
- T** Give me a sourced brief.
- A** Use the web/Drive; 5 bullets with links; skip anything with no source.
- R** A 1-page sourced brief.

YOUR CLAUDE OS — FIRST BUILD

This is what you hand in — a working system plus a documented walkthrough. Tick all six parts.

**3 Projects**

work · research · creative

Work, Research, Creative — three distinct Projects

**3 system prompts**

one per Project
(Who/Domain/Format/Never)

Written for all three

**Notion connector**

live and used

On — walkthrough written into Notion

**1 Schedule**

running on a clock

Daily 8am brief

**1 Plugin**

installed & enabled

Installed in Customize

**1 Routine**

chains 3+ steps

Friday weekly-review — 3 chained steps

DOCUMENT EACH (MILESTONE PROJECT 1)

1. A screenshot of every component
2. One line on why you set it up that way
3. A short walkthrough someone else could follow

WHAT TO SUBMIT

A **working Claude OS** + a documented walkthrough (screenshots + your design decisions). This is **Milestone Project 1** (feeds Week 3).

NOW BUILD IT IN CLAUDE

Here's the order to build your own Claude OS.

- 1 Make **3 Projects**: work, research, creative.
- 2 Write a **system prompt** for each (Who / Domain / Format / Never).
- 3 Turn on the **Notion** connector; install **1 Plugin**.
- 4 Set **1 Schedule**; build **1 Routine** chaining 3+ steps.
- 5 Document every part with **screenshots + why**; save the walkthrough in Notion.

WHAT GOOD LOOKS LIKE — GRADING

- ✓ **3 distinct Projects** (work / research / creative), each with its own system prompt.
- ✓ **3 system prompts** covering Who / Domain / Format / Never.
- ✓ **Notion** connector live and used; **1 Plugin** installed.
- ✓ **1 Schedule** running and **1 Routine** chaining 3+ steps.
- ✓ A **documented walkthrough** — screenshots + why each choice.

YOU'RE DONE WHEN

- ☐ 3 Projects + 3 system prompts + Notion + Schedule + Plugin + Routine (3+ steps).
- ☐ A documented walkthrough with screenshots and your reasoning.
- ☐ Saved as Milestone Project 1.

COMMON MISSES TO FLAG

- ✗ One Project reused, not three distinct.
- ✗ System prompts too short or vague.
- ✗ A "Routine" that is one step, not a 3-step chain.
- ✗ No screenshots or no design reasoning.

That's your Claude OS — Claude now works the way you do. It becomes the live environment for Week 3.

menler
Your turning point in the AI era.
