

ASSIGNMENT · WEEK 2

MY CLAUDE OS — FIRST BUILD

Configure your whole personal Claude OS — Projects, system prompts, a connector, a schedule, a plugin and a routine — then document it. A build task, not a quiz.

THE TASK

Fully configure your **Claude OS: 3 Projects** (work, research, creative), the **Notion** connector live, **3 system prompts**, **1 Schedule** running, **1 Plugin** installed, and **1 Routine** chaining 3+ steps. Document every part with screenshots and explain your design decisions.

HOW TO DO IT

- 1 Make **3 Projects**: work, research, creative.
- 2 Write a **system prompt** for each (Who / Domain / Format / Never).
- 3 Turn on the **Notion** connector; install **1 Plugin**.
- 4 Set **1 Schedule**; build **1 Routine** chaining 3+ steps.
- 5 Document every part with **screenshots + why**; save the walkthrough in Notion.

HINTS

- Make **3 distinct** Projects — not one reused three ways.
- Each system prompt = **Who · Domain · Format · Never**.
- The Routine must **chain 3+ steps**, not a single prompt.
- Turn on the connector least-access — Claude never sees your password.
- Document the **why**, not just the what — screenshots + one line each.

START HERE — YOUR 6 COMPONENTS

#	COMPONENT	WHAT IT NEEDS	YOURS
1	3 Projects	work · research · creative	...
2	3 system prompts	one per Project	...
3	Notion connector	live and used	...
4	1 Schedule	running on a clock	...
5	1 Plugin	installed & enabled	...
6	1 Routine	chains 3+ steps	...

WHAT TO SUBMIT

A **working Claude OS** + a documented walkthrough (screenshots + your design decisions). Share it to the Menler LMS. This is **Milestone Project 1** (feeds Week 3).
~75–90 min.

YOU'RE DONE WHEN

- ☐ 3 Projects + 3 system prompts + Notion + Schedule + Plugin + Routine (3+ steps).
- ☐ A documented walkthrough — screenshots + your reasoning — saved as Milestone Project 1.
