

● WEEK 2 · SESSION 2 · COMPANION E-BOOK

TALK WITH AI.

*Claude Mastery — Speak the Language
— the week you stop chatting with
Claude and start building on it.*

SESSION 2

The full Claude ecosystem — automation
& integrations.

FOR EVERYONE

Written for beginners and professionals at
once.

YOU LEAVE WITH

A personal Claude OS — running, and
doing real work.

WELCOME TO WEEK 2

WEEKLY OBJECTIVE

Last week you sent Claude a message. This week you build the operating system that runs your entire AI workflow — Projects, system prompts, Skills, Connectors, Schedules, Routines and Office, all wired into one workspace you use every day.

Identity shift — AI Aware → Claude Native

THIS BOOK · SESSION 2

SESSION 2

THE FULL CLAUDE ECOSYSTEM

Schedules, Routines, Plugins, and Claude for PowerPoint, Word & Excel — automation and native integrations.

HOW EVERY TOPIC IS BUILT

This is your Week 2 companion — read it alongside the two live sessions. It is written for two people at once: last week's beginner who can now chat with Claude, and the professional ready to build. Skim the plain-English parts; stop on the prompts, the examples, and the build steps.

WHAT	A plain-English definition of the idea.
WHY	Why it matters as you go Claude Native.
WHERE	Where you actually meet it in the Claude app.
WHEN	When to reach for it — and when to ignore it.
HOW	How it works under the hood, still in plain words.

Every topic also carries: advantages and disadvantages, a real example, three professional prompts at three levels, step-by-step build-up and execution, and the odd Fun Fact.

WHAT'S IN SESSION 2

The three Session 2 topics — the full Claude ecosystem, automation and native integrations — then your milestone build. Jump to whatever you need. (New to the Claude app, system prompts or MCP? The interface tour and both hands-on pages are in the Session 1 book.)

2.1	Schedules & Routines Time-triggered tasks and chained sequences — Claude working while you sleep.	p. 4
2.2	Plugins Installable bundles that add new powers to Claude in one click.	p. 7
2.3	Claude for Office Claude inside PowerPoint, Word and Excel — and everywhere else you work.	p. 10
★	My Claude OS — First Build Milestone Project 1 · Your Week 2 deliverable	p. 13

21

SESSION 2

SCHEDULES & ROUTINES

Time-triggered tasks and chained sequences — Claude working while you sleep.

**WHAT**

Two kinds of automation. A **Schedule** runs a task on a cadence — a daily briefing, a Monday digest, a weekly report — with no code and no nudge. A **Routine** is a multi-step sequence you trigger on demand that Claude runs as a chain, step feeding step.

WHY

This is where Claude stops being a tool you operate and becomes one that works for you. The first task you never have to remember to run again is the moment the OS pays for itself.

WHERE

Schedules live under **Scheduled** in the sidebar; Routines are designed as a saved chain you launch on demand. Both can run inside a Project so they inherit its context.

WHEN

Schedule anything recurring on a clock — reports, digests, reminders. Build a Routine for a repeatable multi-step job — research → draft → format — that you kick off yourself.

HOW IT WORKS

A Schedule stores a prompt plus a cadence (hourly / daily / weekly / weekdays) and an approval mode, then fires on its own and reports back. A Routine stores an ordered set of steps so the output of step one becomes the input of step two, all the way through — one trigger, many actions.

ADVANTAGES

- + Recurring work runs itself — set once, forget
- + Routines turn a 6-step task into one click
- + Runs inside a Project, so it keeps your context

DISADVANTAGES

- A bad prompt on repeat scales a bad result
- Schedules need a review cadence so they do not drift
- Over-automating fragile tasks causes silent errors

EXAMPLE

A Schedule at 7am: “summarise my calendar and unread priority emails into a 5-bullet morning brief.” A Routine: research a topic → draft a post → reformat to your house style → output as an Artifact — one trigger, four steps.

**Fun Fact**

The first scheduled task most operators build is a morning brief — and it is often the one habit that survives long after the novelty of AI wears off, because it quietly saves ten minutes every single day.

◆ FIND IT IN CLAUDE

Sidebar → Scheduled → New task

Put a task on a Schedule. Open **Scheduled**, click New task, write a recurring prompt (e.g. a 7am brief), pick the cadence and approval mode, and Schedule it. It then runs on its own and reports back.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Suggest 3 simple daily or weekly tasks I could put on a Claude Schedule for my work, and write the exact prompt for one of them. Keep it beginner-friendly.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Design a Claude Routine for my recurring task of describe it as an ordered chain of 4 steps – what each step does and what it passes to the next. Then write the prompt for step 1.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as an automation designer. For my role, propose 3 Schedules and 2 Routines, each with its trigger, steps, the approval mode it should use, and where a human must review. Rank them by time-saved-to-effort. Output as a table.

BUILD IT UP — STEP BY STEP

- 1 In the sidebar, open Scheduled → New task and pick “Create with Claude”.
- 2 Write a recurring prompt (e.g. a morning brief) and set the cadence.
- 3 Choose an approval mode and, if relevant, the Project it runs in.
- 4 Separately, sketch a 3-step Routine chain for a repeatable job.

EXECUTE IT

- 1 Start on Manual approval; move to Auto once you trust the task.
- 2 Review scheduled output weekly so it does not quietly drift.
- 3 Keep each Routine step single-purpose so the chain stays reliable.
- 4 Log the time saved per week — that is your automation ROI.

2.2

SESSION 2

PLUGINS

Installable bundles that add new powers to Claude in one click.

A PLUGIN CAN BUNDLE...	EXAMPLE	SO YOU CAN
Skills	a research + citation skill set	call polished workflows with /
Connectors	a CRM or analytics connector	reach that tool's data instantly
Commands	team slash-commands	run standard steps the same way
MCP tools	an internal database bridge	plug in tools with no built-in connector

Install one from a directory to add a whole capability at once — and bundle your team's best Skills + Connectors into a plugin to share.

WHAT	A Plugin is a packaged bundle — skills, connectors, commands and tools grouped together — that you install to add a whole capability at once, instead of wiring each piece by hand. Plugins can be grouped into marketplaces you browse and install from.
WHY	Plugins are the fast path to power. Rather than building every Skill and Connector yourself, you install a ready-made set for a workflow — and share your own with your team so everyone works the same way.
WHERE	From the plugin / capabilities directory in the Claude app; installed plugins then surface their commands and tools in your chats and Projects.
WHEN	Install a plugin when someone has already packaged the workflow you need. Build your own when your team needs a standard set of skills and connectors shipped together.

HOW IT WORKS

A plugin bundles its parts behind one install: turning it on registers its skills (callable with /), its connectors, and any tools it adds. Uninstalling cleanly removes the whole set — so you can try one without cluttering your setup.

ADVANTAGES

- + A whole capability installed in one step
- + Shareable — standardise a team on one toolset
- + Try and remove cleanly, no leftover clutter

DISADVANTAGES

- Only as trustworthy as the plugin's source
- Permissions to review before installing
- Too many plugins can overwhelm your command list

EXAMPLE

Instead of hand-building a research skill, a citation skill and a Perplexity connector, you install one “Research” plugin that ships all three — then call its commands with / the same day.

Fun Fact

A plugin is to Claude what an app is to a phone: you do not rebuild the camera, you install one. The operators who move fastest are the ones who install more than they build.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Explain what a Claude Plugin is in plain words, and give me 3 kinds of plugin that would help someone in my field. Keep it simple.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

I want to standardise my team on one set of tools. List the Skills and Connectors I'd bundle into a single plugin for our workflow, and what each one does.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as a Claude systems lead. Design a plugin spec for [my team]: the skills it ships, the connectors it needs, the commands it exposes, the permissions to review, and a rollout plan. Output as a spec sheet.

BUILD IT UP — STEP BY STEP

- 1 Open the plugin / capabilities directory in Claude.
- 2 Find one plugin relevant to your work and review what it bundles.
- 3 Check the permissions it asks for, then install it.
- 4 Try one of its commands with "/" in a chat.

EXECUTE IT

- 1 Install one plugin at a time so you can tell what each adds.
- 2 Only install from sources you trust; read the permissions first.
- 3 Remove any plugin you are not using to keep your command list clean.
- 4 For your team, bundle your best Skills + Connectors into one plugin to share.

23

SESSION 2

CLAUDE FOR OFFICE

Claude inside PowerPoint, Word and Excel — and everywhere else you work.

SURFACE	CLAUDE DOES	REACH FOR IT WHEN
PowerPoint	Full deck from a one-paragraph brief	The deliverable is a slide deck
Word	Draft, edit & format in place	You are writing a document
Excel	Analyse data, formulas, charts	You are working with data
Also lives in	Web · Desktop · Mobile · VS Code · Chrome	Wherever the work already is

Office add-ins edit the **real file** — no copy-paste. Same Claude, different reach: the deck, the doc, the sheet, the repo, or the browser tab.

WHAT

Claude runs natively inside the tools you already use. **Claude for PowerPoint** builds full decks from a one-paragraph brief. **Claude for Word** drafts, edits and formats documents in place. **Claude for Excel** analyses data, writes formulas and builds charts. And Claude **lives everywhere** — web, desktop, mobile, VS Code, Office and Chrome.

WHY

The best AI is the one that meets you where you already work. Instead of copy-pasting between a chat and your documents, Claude operates inside them — which is what makes a Claude OS something you use all day, not a tab you visit.

WHERE

Inside Microsoft Office (PowerPoint, Word, Excel) via the Claude add-in, plus the web app, desktop app, mobile app, VS Code and the Chrome extension.

WHEN

Use Office integrations when the deliverable IS an Office file. Use the app or desktop for open-ended work, mobile on the go, VS Code for code, and Chrome to act on live web pages.

HOW IT WORKS

The Office add-ins give Claude read/write access to the open document, so it edits the actual file rather than handing you text to paste. Each surface is the same Claude with different reach — the deck, the doc, the sheet, the repo, or the browser tab in front of you.

ADVANTAGES

- + No copy-paste — Claude edits the real file
- + One brief becomes a full deck, doc or model
- + Meets you in every tool you already use

DISADVANTAGES

- Office features need the add-in installed and signed in
- Always review generated formulas and figures
- Surface availability varies by plan and platform

EXAMPLE

Paste a one-paragraph brief into Claude for PowerPoint and get a full first-draft deck; drop a messy dataset into Claude for Excel and get cleaned columns, the right formula, and a chart — without leaving the file.

Fun Fact

Generating a full slide deck from a single paragraph feels like magic, but it is the same next-token prediction from Week 1 — just pointed at slide layouts instead of sentences.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Write a one-paragraph brief I could give Claude for PowerPoint to generate a 6-slide deck about my topic, and tell me what to check in the first draft.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

In Claude for Excel, I have describe your data. Give me the exact prompt to clean it, the formula to compute metric, and the chart to visualise it.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as my Office productivity coach. For my role, map which recurring deliverables should be made in Claude for PowerPoint, Word or Excel, the prompt pattern for each, and where I must review before sending. Output as a table.

BUILD IT UP — STEP BY STEP

- 1 Install the Claude add-in in one Office app (start with PowerPoint or Word).
- 2 Give it a one-paragraph brief and let it generate a first draft.
- 3 Edit in place — ask for changes without leaving the file.
- 4 Note which of your recurring deliverables this replaces.

EXECUTE IT

- 1 Always review generated numbers, formulas and claims before sending.
- 2 Keep briefs specific — audience, length and purpose — for better first drafts.
- 3 Pick the surface by the deliverable: deck, doc, sheet, code, or web page.
- 4 Save your best briefs as Skills so every deck starts the same way.

MILESTONE PROJECT 1 · YOUR WEEK 2 DELIVERABLE

MY CLAUDE OS – FIRST BUILD

Build the operating system this week – and use it every day from here on.

IMAGE PLACEHOLDER — GENERATE & DROP IN

A hero image for your Claude OS walkthrough cover

STRUCTURED PROMPT FOR CHATGPT / GEMINI / FIREFLY

SUBJECT	a central glowing “Claude OS” core	OBJECT	six labelled modules orbiting it — Projects, Skills, Connectors, Schedules, Plugins, Routines
ENVIRONMENT	deep-navy control-room backdrop, soft grid, empty space along the top for a title	SITUATION	the modules docked into the core, one Schedule visibly “running”
REFERENCE	clean flat-vector infographic, modern tech-brand illustration	COLOUR STYLE	deep navy base, warm orange accents, small teal & purple highlights, high contrast
MOTION STYLE	still (for a video cover: a pulse travels from the Schedule module outward)	GEOMETRY STYLE	central core with six docked modules, generous negative space at top, minimal, 3:2

BRIEF	Fully configure your personal Claude OS: 3 Projects for different use cases (work, research, creative), the Notion Connector live, 3 custom system prompts written, 1 Schedule running, 1 Plugin installed, and 1 Routine chaining at least 3 steps. Document every component with screenshots and explain your design decisions.
SUBMIT AS	A working system + a documented walkthrough (screenshots + explanations) — Milestone Project 1.
TIME	75–90 minutes
TOOLS	Claude (Projects · Skills · Connectors · Schedules · Plugins · Routines) · Notion · Claude for Office
FEEDS INTO	Feeds into Week 3 — your configured workspace becomes the live environment for every prompting framework.

◆ FIND IT IN CLAUDE

Sidebar → Projects · Scheduled

This is the OS you are building. Three Projects (each with a system prompt — the annotated example is in the Session 1 book), the Notion connector, one Schedule running, one Plugin, one Routine — documented with screenshots. That working system is Milestone Project 1.

WEEK 2 OUTCOME

YOU BUILT THE OS.

*A fully configured, personalised
Claude workspace — Projects, Skills,
Connectors, Schedules, Plugins,
Routines, Notion and Office — that you
actually use every day from here on.*

*You have built the operating system.
Now you run on it.*

AI Aware → Claude Native

NEXT · WEEK 3

Your workspace is live. Week 3 is **Think + Create with AI** — the complete prompt-engineering masterclass and the AI creative studio, practised and stored inside the OS you just built.

menler

Your turning point in the AI era.
