

GEN AI KICKSTARTER · PROJECT 03

INSTRUCTIONS

Content Engine

Posts, captions, thumbnails, and scripts — on autopilot, and still sounding like you.

Day 9 · Claude · Canva AI

Your turning point in the AI era.

03

Content Engine

The brief — what you're building and why

WHAT YOU'LL BUILD

A repeatable system that turns one idea into a full week of on-brand content — hooks, captions, hashtags, short-form scripts, and thumbnails — all in your voice.

- ✓ Generates a week of posts from a handful of topics
- ✓ Keeps your voice consistent with a written profile
- ✓ Produces matching thumbnails from one Canva template
- ✓ Runs in minutes, not a lost afternoon

WHY IT MATTERS

Most people quit creating because doing it by hand every day is exhausting. A content engine removes the friction so consistency becomes possible — and consistency, not talent, is what grows an audience. You also learn to encode “voice” into AI, which applies to any brand work.

WHERE IT RUNS

Two tools: Claude generates the words (via a prompt or a saved Skill), and Canva AI produces the visuals.

WHEN TO BUILD & USE IT

Day 9. Build it when you're ready to post consistently; run it weekly to batch the next seven days.

HOW TO APPROACH IT

The method — *step by step*

These are the moves, not the answers. Work through them in order; the worked solution lives in the separate Solution guide.

- 1 Write a voice profile: who you are, your topics, your tone, three posts you love, words you never use.
- 2 In Claude, build one prompt that turns a topic into a full set: hook, caption, hashtags, and a short script.
- 3 Feed it seven topics to get a week in one run.
- 4 In Canva AI, generate a thumbnail for each using the hook — keep one template so the set looks unified.
- 5 Assemble the words and visuals into a content pack ready to schedule.

REQUIREMENTS

- ✓ A written voice profile
- ✓ Seven complete posts
- ✓ Thumbnails from one consistent template
- ✓ A schedulable content pack

HAND IN

A one-week content pack (7 posts: captions + scripts + thumbnails).

A LITTLE HINT

Give the AI three posts you wish you'd written and say exactly what you like about them — models copy examples far better than adjectives.
