

GEN AI KICKSTARTER · PROJECT 04

INSTRUCTIONS

Automation Suite — Idea Stress-Test

Stress-test any idea — market, competition, ICP — in a single Claude run, with citations you can trust.

Day 10 · Claude · Cowork

Your turning point in the AI era.

04

Automation Suite — Idea Stress-Test

The brief — what you're building and why

WHAT YOU'LL BUILD

A one-run "idea stress-test" built in Claude Cowork: describe any idea and get back a structured validation report — market signals, competitors, ideal customer, risks, and an honest go/no-go — with every external claim cited from live web search.

- ✓ Turns a vague idea into a structured, cited decision doc
- ✓ Uses live web search so numbers and competitors are current
- ✓ Runs the same rigorous checklist on any idea
- ✓ Saves as a reusable Skill and can re-run on a schedule

WHY IT MATTERS

People waste months building things nobody wants. A repeatable stress-test forces the hard questions early and cheaply. Building it teaches you Cowork — Claude working autonomously with web search, files, and schedules — the leap from chatting to automating.

WHERE IT RUNS

In Claude Cowork: a cloud workspace where Claude executes multi-step tasks, searches the web, and produces files.

WHEN TO BUILD & USE IT

Day 10. Use it before starting any project, product, or campaign — and re-run it periodically as markets shift.

HOW TO APPROACH IT

The method — *step by step*

These are the moves, not the answers. Work through them in order; the worked solution lives in the separate Solution guide.

- 1 In Cowork, start a task and describe your idea in two or three honest lines.
- 2 Ask for a structured report with fixed sections so two ideas are comparable.
- 3 Require live web search and a citation on every external claim.
- 4 Save the whole thing as a reusable Skill: idea in, same report out.
- 5 Run a second idea through it to prove it repeats.

REQUIREMENTS

- ✓ Two ideas through one flow
- ✓ A citation on every external claim
- ✓ A clear go/no-go on each
- ✓ Saved as a reusable Skill or prompt

HAND IN

Two validation reports (as files) produced from one reusable flow.

A LITTLE HINT

Tell it to be honest, not optimistic, and to state what would have to be true for the idea to work. That one line changes the quality of the answer.
