

THE SOLUTION BOOK

MY AI PRODUCTIVITY PLAYBOOK + MEDIA KIT

One worked build — follow along.

One fully worked example, so you can see what a finished Week 3 looks like — a prompt library, a research pipeline, a routine, a Gamma deck, and a full AI Media Kit for a real brand.

YOU'LL BUILD THESE FIVE THINGS

Prompt Library

Research Pipeline

Automation Routine

Gamma Deck

AI Media Kit

WHAT, WHY, WHERE, WHEN & HOW

The whole assignment in five plain-English lines.

WHAT

Build your Week 3 output: an AI productivity playbook **and** a portfolio-grade AI Media Kit — a 10-prompt library, a research pipeline, an automation routine, a Gamma deck, and a full media kit for one real brand.

WHY

This is where prompting becomes craft and you direct real creative production. You leave with a system you actually use and a kit you would publish or pitch.

WHERE

Claude (Projects · Skills · Connectors) is the control room; image, video, audio, 3D and deck tools do the production; Notion stores every asset.

WHEN

Week 3 of the Fellowship — 90–105 minutes. Build it on a **real** brand: your startup idea, a college project, a product, or a cause.

HOW

Five parts — (1) a 10-prompt library saved as a Skill, (2) a Perplexity → Claude → NotebookLM research pipeline, (3) a Routine that automates a recurring task, (4) a Gamma deck from a Claude brief, (5) an AI Media Kit: 4 images, a video, an audio asset, a Blender render, a brand deck.

YOUR TOOLBOX — CLAUDE

The three Claude power-tools this week runs on.

S

Skills

[CUSTOMIZE → SKILLS](#)

Reusable rule-sets Claude reloads every time — your 10-prompt library lives here.

C

Connectors

[CUSTOMIZE → CONNECTORS](#)

Wire Notion & Drive into Claude so it works from your real files and stores assets.

R

Routines & Scheduled

[SIDEBAR → SCHEDULED](#)

Chain steps and run a task on a cadence, hands-off — your automation for Part 3.

YOUR TOOLBOX — PRODUCTION

The tools that make the media. Claude writes every prompt; these render it.

I Image AI

2+ PLATFORMS

Gemini / Imagen 3 · DALL·E 3 · Firefly (commercial-safe) · Ideogram (text-in-image). Compare two, pick the best.

V Video AI

15–30 SEC

Kling · Runway Gen-3 · Pika — image-to-video, camera motion, duration control.

A Audio AI

VOICE · MUSIC

ElevenLabs (voice, cloning with consent) · Suno / Soundverse (music & SFX from a text brief).

3 3D & Assemble

RENDER · LAYOUT · DECK

Blender via Claude commands (a 3D render); Canva / Figma to composite; Gamma for the brand deck.

CONNECT & **AUTOMATE** (EXAMPLES)

1 Connect a connector — Notion (Media Library)

- 1 Customize → Connectors (or “+” → Connectors → Manage).
- 2 Pick Notion → Connect → approve in Notion’s own window (OAuth).
- 3 Grant the least access it needs; toggle it on in a chat.
- 4 Ask: “Save these assets to my Media Library.”

Safety — Claude never sees your password, and it never sends or changes anything until you say yes.

2 Make a schedule / routine — Weekly digest

- 1 Sidebar → Scheduled → New task (Create with Claude or set up manually).
- 2 Prompt: “Compile my week into a digest.” Cadence: Friday 5pm.
- 3 Or build a Routine that chains: research → draft → save to Notion.
- 4 Save — it runs in the cloud and reports back.

Like this — a routine is a recurring alarm that does the work, not just one that rings.

CREATE TWO **SKILLS** (EXAMPLES)

A Skill is a saved recipe Claude reloads every time — so you never re-explain.

/ **/prompt-library**

PART 1

- 1 Customize → Skills — or in Cowork: “+” → Record a skill.
- 2 Write a SKILL.md: a name, a one-line description (the trigger), and your 10 framework prompts as the rules.
- 3 Zip the folder (folder as the root) → Upload → enable.
- 4 Run it with /prompt-library and pick the framework you need.

/ **/media-brief**

MEDIA KIT

- 1 Create a second Skill that turns a brand brief into asset prompts.
- 2 Its rules: apply the 8-part visual framework; lock Reference + Colour across the set.
- 3 Output image, video and audio prompts from one brief.
- 4 Run /media-brief for every new asset so the kit stays on-brand.

Like this — edit and re-upload any time; update the description if the trigger changes.

WRITE IT THE **STAR** WAY

STAR = Situation · Task · Action · Result. Every prompt in your library uses the same four parts. Here is one worked example.

S · Situation

I'm building a media kit for "Lumo", a calm focus app for students.

T · Task

Write an on-brand hero image prompt I can run in Firefly.

A · Action

Use the 8-part visual framework; lock Reference = flat editorial illustration, Colour = deep indigo + soft mint; 16:9.

R · Result

One paste-ready image prompt that matches every other asset in the kit.

Why it works — the Situation locks the brand, the Action carries the framework, and the Result pins the format — so the output is usable on the first try.

THE 8-PART VISUAL PROMPT

Every image, video and 3D asset starts here. Lock Reference + Colour and reuse them across the whole kit — that's what makes it cohesive.

Subject

a student at a tidy desk, mid-focus

Object

a softly glowing Lumo app card

Environment

warm, minimal room, morning light

Situation

calm early-morning study

Reference

flat editorial illustration

Colour

deep indigo + soft mint

Motion

still

Geometry

centred, wide 16:9

Worked for “Lumo” — a calm focus app for students. Every asset in the kit shares this Reference + Colour, so the set reads as one brand.

THE FIVE DELIVERABLES

Tick all five. Together they are your Week 3 hand-in.

- ✓ Prompt Library — 10 prompts across 10 frameworks, saved as a Claude Skill — **10 frameworks; saved as /prompt-library**
- ✓ Research Pipeline — Perplexity → Claude → NotebookLM, documented — **one worked question, end to end, cited**
- ✓ Automation Routine — a real recurring task (notes / digest / email drafts) — **a Routine or Schedule that actually runs**
- ✓ Gamma Deck — produced from a Claude brief on a topic in your field — **Claude writes the brief → Gamma builds it**
- ✓ AI Media Kit — 4 images (2+ platforms), 1 video (15–30s), 1 audio, 1 Blender render, 1 brand deck — **one real brand; every prompt documented; assets in Notion**

Milestone Project 2 — “AI Media Kit: Real Brand, Real Assets”

Objective: produce a complete, cohesive AI-generated media package for a real project — something that actually gets used, not a demo.

Build: 4 AI images (2+ platforms compared, best selected), 1 video (15–30s, Kling/Runway), 1 audio (Suno/Soundverse), 1 Blender render, 1 Canva/Figma layout compositing it all, 1 Gamma brand deck.

Submit as — a Notion workspace with all five components, an exported PDF summary, and the media assets.

NOW BUILD IT IN CLAUDE

- 1 Pick one real brand — a startup idea, college project, product, or cause. Everything below is for that brand.
- 2 In Claude, write your 10-prompt library across 10 frameworks and save it as a Skill (/prompt-library).
- 3 Run one research question through Perplexity → Claude → NotebookLM and document the pipeline.
- 4 Build a Routine that automates one recurring task, and connect Notion as your Media Library.
- 5 Direct the media kit: 4 images (compare 2+ tools), a 15–30s video, an audio asset, a Blender render.
- 6 Compose the kit in Canva/Figma and build the brand deck in Gamma from a Claude brief. Store everything in Notion.

WHAT GOOD LOOKS LIKE

- Every asset is production-quality and tells one coherent story
- 2+ image platforms compared, best selected, with a why
- Prompts saved as a Skill so the whole kit is repeatable

COMMON MISSES

- Random, off-brand images with no shared reference/colour
- Prompts not documented — the kit can't be reproduced
- A demo nobody would actually use or publish

That's a full Week 3. Yours can differ — grade the thinking, not the match.
