

● SESSION 1 · COMPANION E-BOOK

AI FOUNDATIONS.

Build the Mental Model, Activate the Machine — where you stop guessing about AI and start operating it.

ONE LIVE SESSION

AI foundations, then Claude OS: Chat, Cowork & Code.

FOR EVERYONE

Written for total beginners and working professionals at once.

YOU LEAVE WITH

A mental model, a prompt system, and your AI Workflow Map.

WELCOME TO SESSION 1

WEEKLY OBJECTIVE

You have used AI. By the end of Session 1 you have a working mental model of how it functions — and you can drive Claude across Chat, Cowork and Code like an operator, not a tourist.

Identity shift — AI Curious → AI Operator

THE TWO HALVES OF SESSION 1

FIRST HALF

BUILD THE MENTAL MODEL

What AI actually is, how an LLM works, why it hallucinates, and how to think in workflows instead of one-off prompts.

SECOND HALF

ACTIVATE THE MACHINE

Claude OS — Chat, Cowork, Code, Artifacts, Projects — and the CLEAR framework that turns vague prompts into sharp results.

HOW EVERY TOPIC IS BUILT

This is your Session 1 companion — read it alongside the live class. It is written for two people at once: the total beginner who has only ever typed into a chatbot, and the professional who wants the real mechanics. Skim the plain-English parts; stop on the prompts and the build steps.

WHAT

A plain-English definition of the idea.

WHY

Why it matters to you as an operator.

WHERE

Where you actually meet it in day-to-day tools.

WHEN

When to reach for it — and when to ignore it.

HOW

How it works under the hood, still in plain words.

Every topic also carries: advantages and disadvantages, a real example, three professional prompts at three levels, step-by-step build-up and execution, and the odd Fun Fact.

WHAT'S IN THIS SESSION

A full tour of the Claude app (3 pages), then the four topics of Session 1, then your session deliverable. Jump to whatever you need.

◆	Getting around Claude The whole interface + how to connect & automate	p. 4
1.1	The AI Landscape AI, machine learning, generative AI — three nested circles, and where Claude sits.	p. 7
1.2	Claude OS One Claude, five surfaces — Chat, Cowork, Code, Artifacts, Projects.	p. 10
1.3	The CLEAR Framework Context, Length, Examples, Audience, Result — five levers that turn vague into sharp.	p. 13
1.4	AI Workflow Thinking Input → Process → Output → Action — stop prompting, start building systems.	p. 16
★	My AI Workflow Map Your Week 1 deliverable	p. 19

BEFORE YOU START · THE CLAUDE-FIRST TOUR

GETTING AROUND CLAUDE

This whole program runs on Claude. Learn the app once — here is the entire window, every part labelled.

THE CLAUDE APP — LEFT SIDEBAR, TOP BAR, CHAT (CENTRE), MESSAGE BOX (BOTTOM), AND THE LIVE PANEL (RIGHT)

THE LEFT SIDEBAR — WHERE YOU MOVE BETWEEN KINDS OF WORK

New — Start a fresh chat or Cowork session. Nothing carries over unless the session shares a Project.

Artifacts — Your gallery of built pages and docs (dashboards, mini-apps, reports) that live on beyond the chat and can be re-opened or shared.

Dispatch — Hand a job to a background agent that plans and runs it while you do other things. (Beta.)

Projects list — Your projects pinned for quick access; click one to jump straight into its space.

Projects — Your Projects — shared folders of chats, files and instructions that persist across sessions and your team.

Scheduled — Tasks that run on a schedule — hourly, daily, weekly. View, pause, edit or run them here.

Customize — Your home for connectors, custom instructions, styles and preferences — set once, applies everywhere.

Account · plan — Bottom-left: who you are and your plan (e.g. Max). The download icon gets the desktop app.

THE TOP BAR — WHERE YOU ARE, AND HOW TO GET AROUND

Chat · Cowork / Code — The mode switch. “Chat & Cowork” for everyday work with files and tools; “Code” opens Claude Code, the developer surface.

Back / forward — Move through screens you have visited, like a browser.

Panel & theme — Top-right icons: show or hide the side panels and switch light / dark.

Search — Find any past chat, project or output by keyword.

Breadcrumb — Shows where you are (e.g. Playbooks / Frontend design...). Click a crumb to go up a level.

THE MESSAGE BOX — HOW YOU BRIEF CLAUDE AND CONTROL IT

The “+” — Add connectors, upload files, and switch on skills for this message.

Approval: Manual / Auto / Skip — When Claude asks before acting. Manual = approve every action; Auto = auto-approves reads, checks writes; Skip = no prompts (trusted work only).

Model · reasoning — Pick the model (e.g. Opus 4.8) and the thinking effort — High for hard problems, lower for speed.

Add folder — Give the session a folder from your computer to read and write — pick the smallest folder that holds what is needed.

Dictate — The mic — talk instead of type.

THE PANEL ON THE RIGHT — WHAT CLAUDE SHOWS YOU WHILE IT WORKS

Progress — The live task list — every step Claude is taking, ticking off as it goes.

Browser · Claude in Chrome — The browser Claude is driving for web tasks, when a browser is connected.

Connectors — The apps switched on for this session (e.g. Web search); add more from “+” or Customize.

Outputs — The finished files from this session — open, preview, download, or send some to Drive.

Context — What this session can see — the connected Project and folders (e.g. Playbooks).

Skills — The packaged know-how Claude can apply here on demand.

◆ FIND IT IN CLAUDE

Message box → Manual / Auto / Skip

Set the approval mode before a big task. New to Cowork? Start on **Manual** so you approve each action. As you trust a routine, move to **Auto**. Keep **Skip** for small, contained jobs only.

THE THREE THINGS THAT TURN CLAUDE FROM A CHATBOT INTO A WORKSPACE

Anyone can type into Claude. The step up is **connecting your own apps**, **putting work on repeat**, and **handing off jobs to the background**. Here is where each lives and how to switch it on.

1

CONNECT YOUR APPS

CONNECTORS

A connector plugs one of your apps — Gmail, Google Drive, Notion, Slack, and hundreds more — straight into Claude, so it can read and act on that data instead of you copy-pasting.

- 1 Open Settings → Connectors (or, in a chat, click “+” → Connectors → Manage connectors).
- 2 Click the “+” next to Connectors to open the directory, then pick the app you want.
- 3 Click Connect, then sign in and approve access in the pop-up (this is OAuth — you approve, Claude never sees your password).
- 4 Back in any chat, click “+” → Connectors and toggle the app on for that conversation.

Free, Pro, Max, Team & Enterprise. Team/Enterprise: an Owner enables a connector for the org first. Choose the least access that does the job.

2

PUT WORK ON REPEAT

SCHEDULED TASKS

A scheduled task is a prompt Claude runs on its own on a set cadence — a Monday digest, a daily inbox triage — and reports back with no nudge from you.

- 1 In the left sidebar, click Scheduled.
- 2 Click New task → Create with Claude (guided) or Set up manually.
- 3 Write the prompt as a full standalone instruction, pick the cadence (hourly / daily / weekly / weekdays), and set the approval mode + folder.
- 4 Click Schedule. Pause, edit, or run it on demand any time from the same page.

Pro, Max, Team & Enterprise. Desktop for all paid plans; web & mobile in beta.

3

HAND OFF, WALK AWAY

DISPATCH

Dispatch is a background agent. You describe an outcome once; it breaks the job into tasks, runs each on its own, and surfaces the results later — even from your phone.

- 1 In the left sidebar, select Dispatch.
- 2 Describe the outcome like you would brief a colleague, in one message.
- 3 Let it plan — it starts child tasks that each show a status (Running, Awaiting input, Completed...).
- 4 Check back later: open any task to read the transcript and grab the files it produced.

Pro & Max, on the latest Claude Desktop (macOS/Windows). Keep the desktop app open to assign from mobile.

1.1

SESSION 1

THE AI LANDSCAPE

AI, machine learning, generative AI — three nested circles, and where Claude sits.

**WHAT**

Three words get mixed up. **Artificial Intelligence** is the whole field — any machine doing something that looks smart. **Machine Learning** is the slice that learns patterns from data instead of being hand-coded. **Generative AI** is the newest slice that *creates* — text, images, audio. A **Large Language Model** (LLM) like Claude is generative AI for text: autocomplete at civilisation scale.

WHY

Getting the levels straight kills most of the confusion — and the fear. When you know an LLM is **predicting** the next chunk of text, not looking up facts, you instantly understand why it can be confidently wrong, and why 2024–26 is the operator moment: the tools are ready, most people just are not using them well.

WHERE

Every chatbot you touch — Claude, ChatGPT, Gemini — is an LLM. Netflix suggestions and spam filters are machine learning. Face unlock is AI. Same family tree, different branches.

WHEN

Think about the limits whenever it matters: an LLM has **no live data** (unless connected to a tool), **no memory across sessions** by default, and **no judgement**. Trust it for reasoning and drafting; verify it for facts and figures.

HOW IT WORKS

An LLM is trained on a vast amount of text and learns one skill: given some text, predict the next **token** (a chunk ~¾ of a word). It does this over and over. The **context window** is how much it can hold at once. A **hallucination** is just a confident wrong prediction — the model fills a gap with what *sounds* right because it has no fact to check against.

ADVANTAGES

- + One mental model explains every AI tool you meet
- + Tells you exactly when to trust the output and when not to
- + Removes the fear — it is prediction, not magic

DISADVANTAGES

- No real-time knowledge unless connected to a tool
- No memory across sessions by default
- Can state wrong things with total confidence

EXAMPLE

Ask an LLM “what happened in the news today” with no tools on, and it may invent plausible headlines — because it is predicting text, not reading today’s news. Connect a search tool and the same model answers correctly.

Fun Fact

ChatGPT reached 100 million users in about two months — the fastest-adopted consumer product in history. The technology under it, the “Transformer”, comes from a single 2017 Google paper: “Attention Is All You Need”.

◆ FIND IT IN CLAUDE

Sidebar → New

Watch next-token prediction live. Open a **New** chat, pick a model with the **model picker**, and type a half sentence. What you are watching is the prediction engine from this page, in real time.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Explain the difference between AI, machine learning and generative AI to someone completely new, using ONE nested-circles analogy. Under 130 words, no jargon.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Explain how you work to someone who has never heard of an LLM. Cover: next-token prediction, the context window, and why you sometimes "hallucinate". Then tell me one thing I should never trust you for without checking.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as an AI literacy trainer. Build a 1-page briefing that takes my team from "AI is magic" to "AI predicts the next token": the 3-level distinction, 3 real limits (no live data, no memory, no judgement), and 3 tasks AI is genuinely great at. Format as a table.

BUILD IT UP — STEP BY STEP

- 1 List 10 tools or apps you use daily; mark which ones use AI under the hood.
- 2 Pick one, read how it actually works, and write 3 plain-English sentences on it.
- 3 Ask Claude: "Explain how you work to someone new to AI" — then critique its answer.
- 4 Find one public LLM hallucination (news, Reddit, or your own test) and screenshot it.

EXECUTE IT

- 1 For anything time-sensitive, assume the model is out of date unless a tool is on.
- 2 When an answer feels too confident, ask "how sure are you, and what would you check?"
- 3 Keep a running note of what AI is great at vs shaky at — that becomes your instinct.
- 4 Post your AI Audit — 3 bullets + 1 screenshot, under 100 words — to Discord.

1.2

SESSION 1

CLAUDE OS

One Claude, five surfaces — Chat, Cework, Code, Artifacts, Projects.

SURFACE	BEST FOR	REACH FOR IT WHEN
Claude Chat	Fast reasoning, analysis, writing, Q&A	A quick question or a one-off draft
Claude Cework	A persistent workspace across tasks & files	A multi-step job that touches your files
Claude Code	Building & debugging software	You are writing or fixing code
Artifacts	Live docs, apps, SVGs you can keep	You will reuse or share the output
Projects	Memory, instructions, uploaded knowledge	Work that needs standing context

Same Claude underneath — what changes is the **context** and **tools** each surface gives it. Pick the surface, pick what Claude can see and do.

- WHAT

Claude is not one box. **Chat** is fast conversational reasoning. **Cework** is a persistent workspace that keeps context across tasks and touches your files. **Code** is for building and debugging software. **Artifacts** are live outputs — documents, apps, SVGs — you can use directly. **Projects** hold memory, custom instructions and uploaded knowledge so Claude stays on-context.
- WHY

Most people only ever use Chat — and leave 80% of Claude on the table. Knowing which surface fits the job is the difference between a chatbot and an operating system for your work.
- WHERE

All five live in the same Claude app: Chat and Cework share one message box, Code opens the developer surface, Artifacts appear beside your chat, and Projects sit in the left sidebar.
- WHEN

Quick question or draft → **Chat**. A multi-step job with your files → **Cework**. Building software → **Code**. Something you will reuse or share → save it as an **Artifact**. Work that needs standing context → put it in a **Project**.

HOW IT WORKS

Underneath, it is the same Claude model. What changes is the **context** and the **tools** each surface gives it: Chat is stateless per conversation, Cowork adds a workspace + files + a task list, Code adds a repo and a terminal, Projects add persistent memory and instructions. Pick the surface, and you pick what Claude can see and do.

ADVANTAGES

- + One skill (prompting) works across every surface
- + Right surface = dramatically better results for the job
- + Projects give Claude lasting memory of your world

DISADVANTAGES

- Choice paralysis at first — five surfaces to learn
- Some surfaces are plan-gated (Cowork, Code)
- Context does not cross surfaces unless you move it

EXAMPLE

Drafting a quick email? Chat. Turning 12 messy CSVs into one clean report with charts? Cowork, with the folder connected. Building a small web tool? Code. The task picks the surface.

Fun Fact

The word “Artifact” was chosen deliberately: Claude does not just answer, it leaves behind a thing you can keep — a doc, an app, a chart. It is the difference between advice and a deliverable.

◆ FIND IT IN CLAUDE

Sidebar → New · Cowork · Code

Try all three surfaces in five minutes. Run one small task in **Chat**, then in **Cowork** with a folder attached, then peek at **Code**. Feeling the difference beats reading about it — see p.4–5 for the full map.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

In a simple table, list Claude Chat, Cowork, Code, Artifacts and Projects with a one-line "what it's for" and one example task for each. Plain words.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Here is a real task: describe your task. Tell me which Claude surface (Chat / Cowork / Code / Project) fits best and why, and what I'd lose if I used the wrong one.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as a Claude onboarding coach. From my [role and 5 recurring tasks], build a decision tree that routes each task to the right Claude surface, note which need a Project for memory, and flag where an Artifact should be saved for reuse. Output as a table.

BUILD IT UP — STEP BY STEP

- 1 Take one real task — an email, a research question, or a decision.
- 2 Run it in Claude Chat and screenshot the output.
- 3 Run the same task in Cowork and screenshot that output.
- 4 Write a 3-sentence comparison: which was better, and why.

EXECUTE IT

- 1 Default to Chat for quick things; escalate to Cowork the moment files are involved.
- 2 Save anything you will reuse (a template, a checklist) as an Artifact.
- 3 Spin up a Project for each ongoing area so Claude keeps its context.
- 4 Note your default surface per work context — submit the drill as a Claude Artifact.

1.3

SESSION 1

THE CLEAR FRAMEWORK

Context, Length, Examples, Audience, Result — five levers that turn vague into sharp.

C**Context**

the situation & background

L**Length**

how long the output should be

E**Examples**

show what "good" looks like

A**Audience**

who it is for — tone & depth

R**Result**

the exact format you want

WHAT

Vague prompts produce vague outputs — garbage in, garbage out. **CLEAR** is the fix: give **C**ontext (the situation), **L**ength (how long), **E**xamples (what good looks like), **A**udience (who it is for), and the **R**esult (the exact output you want). Five levers, one sharp prompt.

WHY

Prompting is the one skill that multiplies every other AI skill. The gap between a beginner and an operator is rarely the model — it is the instructions. CLEAR closes that gap in minutes.

WHERE

Everywhere you type into Claude. The same five levers work in Chat, in a Project instruction, in a Cowork brief, and inside a saved prompt in your library.

WHEN

Use CLEAR whenever the output matters or you will run the prompt more than once. For a throwaway question, a plain sentence is fine — CLEAR is for work you will judge or repeat.

HOW IT WORKS

Each lever removes a guess the model would otherwise make: Context stops wrong assumptions, Length controls sprawl, Examples anchor quality, Audience sets tone and depth, Result fixes the format. **Role prompting** (“act as a...”) and **chain prompting** (break big tasks into steps) stack on top for harder jobs.

ADVANTAGES

- + Turns a hit-or-miss chatbot into a reliable tool
- + Reusable — a good prompt becomes a portfolio asset
- + Works on every model, not just Claude

DISADVANTAGES

- Over-prompting can box the model in — leave room to think
- Bad examples teach bad output
- Long prompts cost more tokens — be tight, not bloated

EXAMPLE

“Write about our product” gives mush. CLEAR: “You are a B2B copywriter (audience: CFOs). In 90 words, write a LinkedIn post announcing [feature]; match the tone of this example [paste]; end with one question.” Same model, night-and-day result.

Fun Fact

The single highest-leverage word in prompting is often “example”. Showing Claude one sample of what “good” looks like usually beats three paragraphs describing it.

◆ FIND IT IN CLAUDE

Message box → Artifact appears beside the chat

Save your prompts as an Artifact. Ask Claude to turn your CLEAR prompts into a **Prompt Cheat Sheet Artifact**. It saves beside the chat and becomes a reusable portfolio asset — find your saved ones under **Artifacts** in the sidebar.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Take this weak prompt: "paste a vague prompt". Rewrite it using the CLEAR framework (Context, Length, Examples, Audience, Result) and show me the before and after.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as a prompt coach. Here are 3 prompts I use: paste. For each, tell me which CLEAR lever is missing, rewrite it, and explain in one line why the new version will work better.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as my prompt engineer. Build a reusable CLEAR prompt template for my recurring task, with the fixed parts written and the variable parts as bracketed slots. Add a 1-line note on when to raise the detail and when to keep it lean.

BUILD IT UP — STEP BY STEP

- 1 Take 5 prompts you already use (or write 5 common to your work).
- 2 Rewrite each with CLEAR — show the before and after side by side.
- 3 Run both versions for 2 of them and compare the outputs.
- 4 Group your best 10 into a Prompt Cheat Sheet by category.

EXECUTE IT

- 1 Start every important prompt by naming the audience and the result.
- 2 Paste one example of “good” whenever quality matters.
- 3 For big tasks, chain it: ask for an outline first, then each part.
- 4 Save the Cheat Sheet as a Claude Artifact — it becomes a portfolio asset.

1.4

SESSION 1

AI WORKFLOW THINKING

*Input → Process → Output → Action – stop prompting,
start building systems.*

**WHAT**

A one-off prompt solves one task. An **AI workflow** solves it every time: **Input** (what goes in) → **Process** (the Claude step) → **Output** (what comes out) → **Action** (what happens next). The shift from tool thinking to **systems thinking** is what turns AI from a toy into leverage.

WHY

Operators do not re-explain a task every time — they design it once and reuse it. Mapping your work into workflows is the first step to automation, to a portfolio, and to real time saved every week.

WHERE

Any task you repeat — a weekly report, inbox triage, drafting outreach, summarising calls. Each is an Input → Process → Output → Action loop waiting to be drawn.

WHEN

Apply it to anything you do more than once a week. One-off tasks stay in Chat; recurring tasks deserve a workflow you can hand to Claude — and later, to a Schedule or Routine.

HOW IT WORKS

Pick a recurring task and split it into the four stages. Ask: what can Claude do (the Process), and what must stay human (judgement, approval, the Action)? Write the current process, redesign it with Claude in the loop, and document the map as an Artifact — the seed of a reusable system.

ADVANTAGES

- + Design once, reuse forever — compounding time saved
- + Makes tasks handoff-ready for automation later
- + Each map is a portfolio artefact that proves your skill

DISADVANTAGES

- Not every step should be delegated — keep humans on judgement
- A bad workflow scales a bad process; fix it first
- Over-engineering simple tasks wastes more time than it saves

EXAMPLE

Weekly report, before: gather numbers, write, format — 90 minutes. After: paste the numbers (Input) → Claude drafts and charts (Process) → you review the Artifact (Output) → send it (Action) — 20 minutes. Same result, drawn once, reused weekly.

**Fun Fact**

The operators who win with AI are rarely the best prompters — they are the best workflow designers. A mediocre prompt inside a great system beats a brilliant prompt you have to retype every time.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Take one task I do every week: describe it. Break it into Input → Process → Output → Action, and tell me which single step Claude could take over first.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as a workflow designer. Here are 3 recurring tasks: list them. For each, map the current process, then redesign it with Claude in the loop, and estimate the time saved per week.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as an automation strategist. From my role, design 3 AI workflows as Input → Process → Output → Action, mark where a human must review, note which could later run on a Schedule or Routine, and rank them by time-saved-to-effort. Output as a table plus a short recommendation.

BUILD IT UP — STEP BY STEP

- 1 Identify 3 tasks you do repeatedly each week.
- 2 For each, write the current process — exactly how you do it now.
- 3 Redesign each with Claude in the loop: Input → Claude step → Output → Action.
- 4 Draw the map as a Claude Artifact.

EXECUTE IT

- 1 Delegate the Process step to Claude; keep judgement and the final Action human.
- 2 Estimate time saved per week for each workflow — that is your ROI.
- 3 Start with the highest time-saved, lowest-effort workflow first.
- 4 Post your map to Discord and get 2 peers to comment before Session 2.

YOUR WEEK 1 DELIVERABLE

MY AI WORKFLOW MAP

The one thing to build this session — it feeds straight into Session 2.

IMAGE PLACEHOLDER — GENERATE & DROP IN
A hero image for your workflow-map cover

STRUCTURED PROMPT FOR CHATGPT / GEMINI / FIREFLY

SUBJECT	a clean four-stage flow labelled Input → Process → Output → Action	OBJECT	a glowing central “Claude” node sitting on the Process stage
ENVIRONMENT	deep-navy backdrop, soft grid, empty space along the top for a title	SITUATION	the four stages connected left-to-right, quietly “powered on”
REFERENCE	clean flat-vector infographic, modern tech-brand illustration	COLOUR STYLE	deep navy base, warm orange accents, small teal & purple highlights, high contrast
MOTION STYLE	still (for a video cover: a pulse travelling left to right along the flow)	GEOMETRY STYLE	horizontal flow, generous negative space at top, minimal, 3:2

BRIEF	Identify 3 tasks you do repeatedly. For each, write the current process, then redesign it with Claude in the loop as Input → Process → Output → Action. Estimate the time saved per week, and draw the whole thing as one map.
SUBMIT AS	A Claude Artifact — a 1-page workflow map, 3 tasks documented, with estimated weekly time saving.
TIME	60 minutes
TOOLS	Claude Chat · Claude Cowork · Claude Artifacts · Discord
FEEDS INTO	Feeds into Session 2 — the workflows you map here become the Skills, Connectors and Schedules you build next.

◆ FIND IT IN CLAUDE

Sidebar → Projects → New project

Build the map as an Artifact, in a Project. Make a Project for your Kickstarter work so every chat and file lives in one place. Ask Claude to draw the workflow map as an **Artifact** — it saves beside the chat and drops straight into your portfolio.

SESSION 1 OUTCOME

THE MACHINE IS ON.

A working mental model of AI, fluency across Claude's five surfaces, a CLEAR prompt system, and your first AI Workflow Map.

The mental model is built. The machine is on.

AI Curious → AI Operator

NEXT · SESSION 2

You have the mental model and the machine. Session 2 is the **power layer** — Claude Skills, Connectors, Projects and research intelligence — turning your workflow maps into systems that run themselves.

menler

Your turning point in the AI era.
