

THE SOLUTION BOOK

MY AI WORKFLOW MAP

Build it with me — step by step.

A build-along guide for a total beginner — we go slow, explain every button, and finish your map together. If you can follow a recipe, you can do this.

YOU'LL USE THESE SIX THINGS

Customize

Connectors

Skills

Projects

Artifacts

Scheduled

WHAT, WHY, WHERE, WHEN & HOW

Before we build, here's the whole assignment in five plain-English lines.

WHAT

You pick 3 things you do again and again, and make one simple picture (a “map”) that shows how Claude — your AI helper — can do the boring parts of each.

WHY

So you stop doing the same slow steps by hand every week. The map shows where the robot helper takes over, so you get free time back.

WHERE

All inside Claude: you switch things on in **Customize**, keep your work in a **Project**, and draw the final map as an **Artifact**.

WHEN

You build it once, now. After that, anything that happens on a rhythm (like a Monday research list) can run on its own using **Scheduled**.

HOW

For each task write three things: what you do *now* → how Claude helps (Input → Process → Output → Action) → how much time you save. Then draw all 3 as one map.

YOUR TOOLBOX

Six things live inside Claude. Here are the first three — set-up tools you use before you build.

Customize

[Left strip → Customize](#)

The settings room. This is where you switch apps and skills on.

- 1 Click **Customize** in the left strip.
- 2 You'll see **Connectors** (your apps) and **Skills** (your saved tricks).
- 3 Turn things on here first, then use them in a chat.

Like this — Like the settings menu in a video game — you set things up before you play.

Connectors

[Customize → Connectors](#)

A plug that lets Claude see ONE of your apps, like your Calendar or email.

- 1 Customize → **Connectors** → tap +.
- 2 Find your app, tap **Connect**, sign in and tap **Allow**.
- 3 In a chat, tap + → Connectors → switch it **on** for that chat.

Like this — Like plugging a lamp into the wall. Plug in once; flick the switch when you want light. (Claude never sees your password.)

Skills

[Type / in the chat](#)

A saved instruction you call by name. The name IS the command.

- 1 To use one, type / then its name, e.g. **/meeting-notes**.
- 2 To make one, ask Claude to "save this as a skill" and give it a short name.
- 3 Now you can call that trick any time with /.

Like this — Like a cheat-code you type to instantly do a trick, instead of explaining it every time.

YOUR TOOLBOX — PART 2

And the three you build *with* — a folder that remembers, the thing you make, and a timer.

Projects

Left strip → Projects

A folder that remembers. Everything inside shares the same memory.

- 1 Left strip → **Projects** → **New project** → name it “My Workflow Map”.
- 2 Add notes or files with **Upload**; turn on the connectors you need.
- 3 Do all your assignment chats *inside* the project so nothing is forgotten.

Like this — Like a school binder for one subject — all the right pages in one place.

Artifacts

Appears on the right when Claude builds

The thing Claude makes that you keep — a doc, a table, a little app, or your map.

- 1 Ask Claude to “make this as an Artifact.”
- 2 It opens on the right — you can edit it and it saves.
- 3 Your finished workflow map will be an Artifact.

Like this — Like your finished drawing you pin on the wall — a real thing you can keep and show.

Scheduled

Left strip → Scheduled

Jobs on a timer that run all by themselves.

- 1 Left strip → **Scheduled** → **New task**.
- 2 Say the job in plain words and pick how often (daily / weekly).
- 3 To stop it later: Scheduled → **Pause** or delete.

Like this — Like an alarm clock, but for tasks — it wakes up and does the job without you.

CONNECT TWO TOOLS (EXAMPLES)

A connector plugs one of your apps into Claude. Here are the two you'll use for this assignment. Do each one once.

Google Calendar

So Claude can see your week and help you find time — great for the “scheduling” task on your map.

- 1 Customize → Connectors → + → find **Google Calendar** → **Connect**.
- 2 Sign in to Google and tap **Allow**.
- 3 In a chat: + → Connectors → turn **Google Calendar** on.
- 4 Try it: “What’s on my calendar this week, and when am I free for 1 hour?”

Gmail

So Claude can turn your notes into client update emails — the “weekly emails” task on your map.

- 1 Customize → Connectors → + → find **Gmail** → **Connect** → **Allow**.
- 2 In a chat: + → Connectors → turn **Gmail** on.
- 3 Try it: “Draft a friendly client update from these notes.”
- 4 You always **read and send it yourself** — Claude just writes the draft.

Safety — Claude never sees your password, and it should never send an email or make a change until you’ve read it and said yes.

USE TWO SKILLS (EXAMPLES)

A skill is a saved trick you call with /. Here are two that make this assignment faster. Type the slash-name, then give it your stuff.

/meeting-notes

Turns messy call notes into a clean list of tasks — with who does it and by when.

- 1 In the chat, type **/meeting-notes**.
- 2 Paste your messy notes underneath.
- 3 You get a tidy action-item table back.
- 4 It won't invent names or dates — anything unclear it marks **TBD** for you to fill.

/weekly-digest

Builds your 1-page research digest on any topic, with source links.

- 1 Turn on a web/search connector first (so it can look things up).
- 2 Type **/weekly-digest** and your topic.
- 3 You get 5 short summaries, each with a link.
- 4 Open every link before you trust it — then share.

Tip — No skill on your account yet? Just ask Claude: "Save this as a skill called meeting-notes." Next time, **/meeting-notes** runs it.

WRITE PROMPTS THE **STAR** WAY

A prompt is just what you type to Claude. Good prompts follow **STAR** — four easy lines. Fill each line and you'll get a great answer, every time.

S**Situation**

What's going on (the background).

T**Task**

What you want done (one job).

A**Action**

Exactly how Claude should do it (the rules).

R**Result**

What you want back (the shape of the answer).

Client update email

- S** I run a small business and send a weekly update to 4 clients.
- T** Write this week's update for one client.
- A** Use my bullet notes below. Keep it friendly, 4–6 short lines, end with next steps. Ask me if a fact is missing — don't make one up.
- R** A ready-to-send email I only need to quickly check. [paste your notes]

Meeting notes → tasks

- S** I just finished a team call and my notes are messy.
- T** Pull out the action items.
- A** From the notes below, list each task with who owns it and its due date in a table. Never invent a name or date — mark anything unclear as TBD.
- R** A clean action-item table I can paste into my task app. [paste your notes]

Weekly research digest

- S** Every Monday I need to know what's new in my industry.
- T** Make a short research digest on [my topic].
- A** Using the web search connector, find 5 recent, trustworthy items from this week; summarise each in 1–2 lines with the source link. Skip anything with no source.
- R** A 1-page digest with links I can skim and share.

YOUR WORKED MAP

Here are three tasks, done. Yours will be different — that's fine. This just shows what "finished" looks like.

#	TASK & YOUR CHECK	HOW YOU DO IT NOW	WITH CLAUDE — I → P → O → A	SAVED
1	Weekly client emails Check: You check every fact before it sends.	Recall the week, write each client's update from scratch — ~15 min × 4.	I Your bullet notes + last update. P Claude drafts each email in your voice (uses Gmail connector). O 4 draft emails. A You check and send.	45 MIN/WK
2	Meeting notes → tasks Check: Check it didn't invent an owner or date.	Re-read messy notes, hand-pull tasks/owners/dates — ~20 min × 2.	I Paste the notes. P Run /meeting-notes. O A clean task table. A You confirm owners, add to your app.	30 MIN/WK
3	Weekly research digest Check: Open every source before trusting it.	Search, open ten tabs, copy links — ~50 min.	I Your topic + questions. P Run /weekly-digest (search connector on). O A 1-page digest with links. A You verify links, share.	35 MIN/WK

~110 min / week ≈ 1.8 HOURS BACK, EVERY WEEK

NOW DO IT IN CLAUDE

Follow these five steps and you'll have your own map. Yours will look different from the example — that's exactly right.

- 1 Open **Projects** → New project → “My Workflow Map”.
- 2 Turn on the connectors you need (Calendar, Gmail) in **Customize**.
- 3 Write your 3 tasks using the **STAR** prompts as your starting point.
- 4 Ask Claude: “Draw my 3 tasks as one workflow map, as an **Artifact**.”
- 5 Set the research one to repeat every Monday in **Scheduled** (optional).

YOU'RE DONE WHEN

- ☐ 3 tasks you really do every week (not one-offs).
- ☐ Each shows: today → Claude's way ($I \rightarrow P \rightarrow O \rightarrow A$) → time saved.
- ☐ At least one “human-check” where you look before trusting it.
- ☐ It's one map, saved as an Artifact.

That's it — you built a real AI workflow. The map is yours to keep and grow.
