

THE SOLUTION BOOK

CONNECTED CLAUDE WORKSPACE

One worked build – follow along.

One fully worked build, so you can see what “finished” looks like — a Project that knows who it is, with your rules, your docs, and an app plugged in.

YOU'LL USE THESE SIX THINGS

Customize

Connectors

Skills

Projects

Artifacts

Scheduled

WHAT, WHY, WHERE, WHEN & HOW

Before we build, here's the whole assignment in five plain-English lines.

WHAT

You build **one** Claude Project that already knows who it is, has your rules (a Skill), your documents (knowledge), and one of your apps plugged in (a Connector). Then you run **3 real jobs** through it.

WHY

So you stop re-explaining yourself in every new chat. A Project *remembers* — set it up once, and every chat inside it starts smart.

WHERE

Left strip → **Projects**. You add the system prompt, attach a Skill, upload a document, and turn on a Connector — all in one place.

WHEN

Build it once, now. Reuse it forever — every task in that area goes through this one Project instead of a blank chat.

HOW

Give it a **150+ word system prompt** (who it is, your field, the format you want, what to never do) → attach a **Skill** → upload one **document** → turn on one **Connector** → run **3 real tasks** through it (no copy-paste, no tab-switching).

YOUR TOOLBOX

Six things live inside Claude. Here are the first three — the set-up tools.

Customize

[Left strip → Customize](#)

The settings room. This is where you switch apps and skills on.

- 1 Click **Customize** in the left strip.
- 2 You'll see **Connectors** (your apps) and **Skills** (your saved tricks).
- 3 Turn things on here first, then use them in a chat.

Like this — Like the settings menu in a video game — you set things up before you play.

Connectors

[Customize → Connectors](#)

A plug that lets Claude see ONE of your apps, like your Calendar or email.

- 1 Customize → **Connectors** → tap +.
- 2 Find your app, tap **Connect**, sign in and tap **Allow**.
- 3 In a chat, tap + → Connectors → switch it **on** for that chat.

Like this — Like plugging a lamp into the wall. Plug in once; flick the switch when you want light. (Claude never sees your password.)

Skills

[Type / in the chat](#)

A saved instruction you call by name. The name IS the command.

- 1 To use one, type / then its name, e.g. **/meeting-notes**.
- 2 To make one, ask Claude to “save this as a skill” and give it a short name.
- 3 Now you can call that trick any time with /.

Like this — Like a cheat-code you type to instantly do a trick, instead of explaining it every time.

YOUR TOOLBOX — PART 2

And the three you build *with* — the folder that remembers is the star of this assignment.

Projects

Left strip → Projects

A folder that remembers. Everything inside shares the same memory.

- 1 Left strip → **Projects** → **New project** → name it “My Workflow Map”.
- 2 Add notes or files with **Upload**; turn on the connectors you need.
- 3 Do all your assignment chats *inside* the project so nothing is forgotten.

Like this — Like a school binder for one subject — all the right pages in one place.

Artifacts

Appears on the right when Claude builds

The thing Claude makes that you keep — a doc, a table, a little app, or your map.

- 1 Ask Claude to “make this as an Artifact.”
- 2 It opens on the right — you can edit it and it saves.
- 3 Your finished workflow map will be an Artifact.

Like this — Like your finished drawing you pin on the wall — a real thing you can keep and show.

Scheduled

Left strip → Scheduled

Jobs on a timer that run all by themselves.

- 1 Left strip → **Scheduled** → **New task**.
- 2 Say the job in plain words and pick how often (daily / weekly).
- 3 To stop it later: Scheduled → **Pause** or delete.

Like this — Like an alarm clock, but for tasks — it wakes up and does the job without you.

CONNECT TWO APPS (EXAMPLES)

A connector plugs one of your apps into Claude, so your Project can use your real stuff. Here are two good ones for this assignment.

Google Drive

So Claude can read your documents right inside the Project — your brand guide, price list, notes. This helps the “knowledge” part.

- 1 Customize → Connectors → + → find **Google Drive** → **Connect**.
- 2 Sign in to Google and tap **Allow**.
- 3 In your Project chat: + → Connectors → turn **Google Drive** on.
- 4 Try it: “Using my brand guide in Drive, list our 3 key rules.”

Gmail

So your Project can draft real emails from your notes — great for one of your 3 tasks.

- 1 Customize → Connectors → + → find **Gmail** → **Connect** → **Allow**.
- 2 In your Project chat: + → Connectors → turn **Gmail** on.
- 3 Try it: “Draft a reply to this customer from our product list.”
- 4 You always **read and send it yourself**.

Safety — Claude never sees your password, and it should never send an email or change anything until you’ve read it and said yes.

USE TWO SKILLS (EXAMPLES)

A skill is a saved rule-set you call with /. Attach one to your Project so every chat follows your style. Here are two handy ones.

/brand-voice

Writes everything in your house style — your tone, your do's and don'ts, your format.

- 1 Ask Claude: "Save my writing rules as a skill called brand-voice."
- 2 Give it 5–8 clear rules (tone, banned words, format).
- 3 In your Project, type **/brand-voice** before a writing task.
- 4 Now every draft sounds like you.

/weekly-report

Turns raw numbers or notes into your standard weekly report, the same way each time.

- 1 Save it as a skill with your report layout as the rules.
- 2 Type **/weekly-report** and paste your numbers.
- 3 You get the same tidy report shape every week.
- 4 Tweak the rules any time by re-saving.

Tip — No skill yet? Just ask Claude: "Save this as a skill called brand-voice." Next time, **/brand-voice** runs it. The name IS the command.

WRITE YOUR SYSTEM PROMPT

The system prompt is your Project's **brain** — it tells Claude who it is, before you ask anything. Cover four parts, and make it **150+ words**.

WHO

Who Claude is and who it works for.

DOMAIN

Your field, and who the audience is.

FORMAT

The default shape of answers you want.

NEVER

The hard lines it must never cross.

A worked example (≈150 words)

You are the content assistant for a small D2C skincare brand called Lumi. **Domain:** direct-to-consumer skincare in India; our audience is women aged 25–40 who want honest, no-jargon skincare. **Voice & format:** warm, clear, specific; short sentences; no hype words like “miracle” or “guaranteed.” For social copy give 3 options; for an email give a subject + body; for a report use a short table. **Knowledge:** use the brand guide and product list I’ve uploaded as the single source of truth for every claim and price — never invent a product, price, or ingredient. **Never:** never make a health or medical claim, never promise results, never share a discount I haven’t approved, and never copy another brand’s voice. When unsure, ask me one clear question before you write.

RUN 3 TASKS THE STAR WAY

Inside your Project, each job is a prompt. Good prompts follow **STAR** — Situation, Task, Action, Result. Run three real ones through your Project.

S**Situation**

What's going on.

T**Task**

The one job.

A**Action**

The rules.

R**Result**

What you want back.

Task 1 · Instagram captions

- S** We're launching a new vitamin C serum.
- T** Write 3 caption options.
- A** Use the brand guide; no health claims; add a soft call to action.
- R** 3 captions, each 2 lines or less.

Task 2 · Customer email reply

- S** A customer asked if the serum suits sensitive skin.
- T** Draft a reply.
- A** Answer honestly from the product list; if it's not covered, say so; no medical claims.
- R** A friendly, ready-to-send email (I'll send it).

Task 3 · Weekly content report

- S** It's the end of the week.
- T** Summarise this week's posts and engagement.
- A** Run /weekly-report on the numbers I paste; don't invent any.
- R** A short table I can share with the team.

YOUR PROJECT SETUP SUMMARY

This is what you hand in — proof your Project is really connected. Tick all four ingredients, then list your 3 tasks.

**System prompt**

150+ words — who / domain /
format / never

Lumi content assistant — 150-word prompt (who, D2C skincare, formats, never-do)

**A Skill attached**

at least one, and actually used

/brand-voice — used on every writing task

**A knowledge doc**

one uploaded; answers use it,
don't invent

Brand Guide.pdf + product list uploaded

**A Connector on**

one enabled and used

Google Drive — reads the brand docs

3 TASKS RUN INSIDE THE PROJECT (NO COPY-PASTE)

1. Instagram captions — 3 options, on-brand
2. Customer email reply — honest, from the product list
3. Weekly content report — a table via /weekly-report

WHAT TO SUBMIT

A **Claude Artifact** — a Project Setup Summary: your system prompt + skill rules + connector used + the 3 task results. This is **Portfolio asset #2**.

NOW BUILD IT IN CLAUDE

Here's the exact order to build your own connected Project.

- 1 Left strip → **Projects** → **New project** → name it.
- 2 Paste your **150+ word system prompt** into the instructions box.
- 3 Attach a **Skill** and **upload** your knowledge doc.
- 4 Turn on one **Connector** (Customize → Connectors).
- 5 Run your **3 tasks** inside the Project; save a Setup Summary as an **Artifact**.

WHAT GOOD LOOKS LIKE — GRADING

- ✓ A real **150+ word** system prompt (who / domain / format / never-do).
- ✓ At least one **Skill** attached AND actually used.
- ✓ One **knowledge doc** uploaded; answers use it and don't invent facts.
- ✓ One **Connector** enabled and used.
- ✓ **3 real tasks** run inside the Project — no tab-switching or copy-paste.

YOU'RE DONE WHEN

- ☐ One Project with a system prompt + skill + knowledge doc + connector.
- ☐ 3 real tasks run inside it (not in a blank chat).
- ☐ A Project Setup Summary saved as an Artifact.

COMMON MISSES TO FLAG

- ✗ System prompt too short or vague ("be helpful").
- ✗ A Skill attached but never actually used.
- ✗ Claude invents facts that aren't in the knowledge doc.
- ✗ Tasks done in a plain chat, not inside the Project.

That's a real connected workspace — Claude now knows your world before you even ask. Keep it and reuse it.
