

ASSIGNMENT 1 · SESSION 3

LIVE AUTOMATION SYSTEM

Ship three automations that run together and save real time — a Schedule, a Routine, and an external Zap, each solving a different real problem. A build task, not a quiz.

THE TASK

Ship **three automations**: a **Schedule** (time-triggered — run it 3 days, keep Day 1 vs Day 3), a **Routine** (on-demand — input template + prompt chain + fixed output), and an **external Zap** (Trigger → Claude step → Output). Each solves a different real problem.

HOW TO DO IT

- 1 Pick **3 different real problems** — one for each automation type.
- 2 Build the **Schedule** (left strip → Scheduled → New task); run it 3 days.
- 3 Build the **Routine** — an input template + fixed steps + a fixed output.
- 4 Build the **external Zap** in Zapier/n8n: Trigger → a Claude step → Output.
- 5 Map all three as one **Artifact**; note the problem + time saved for each.

HINTS

- Three **different** types — not three of the same automation.
- Actually **run the Schedule** 3 days; keep Day 1 vs Day 3 to show it sharpening.
- A Routine needs a **fixed input template** AND a fixed output shape.
- Write each prompt in **STAR**, and say what NOT to do (“never invent a number”).
- Be **honest** on time saved — real minutes beat invented hours.

START HERE — YOUR THREE SYSTEMS

#	SYSTEM	WHAT IT NEEDS	YOURS
1	Schedule	time-triggered; run 3 days (Day 1 vs Day 3)	...
2	Routine	input template → steps → fixed output	/...
3	External Zap	Trigger → Claude step → Output	...

THEN WRITE EACH PROMPT IN STAR

- 1 *Schedule prompt — Situation · Task · Action · Result...*
- 2 *Routine prompt...*
- 3 *Zap prompt...*

WHAT TO SUBMIT

One **Claude Artifact** — an Automation Stack Map: all **three systems**, the problem each solves, and the **time saved**. Share the Artifact link (or export a PDF) to the Menler LMS. This is **Portfolio asset #3. ~90 min.**

YOU'RE DONE WHEN

- ☐ A Schedule, a Routine and an external Zap — three different problems.
- ☐ The Schedule ran 3 days, and all three are on one Stack Map Artifact.
