

THE SOLUTION BOOK

YOUR AI CAPSTONE

One worked build – follow along.

One fully worked capstone example, so you can see what “finished” looks like — one real, specific solution with Claude at the core, shipped to a public link.

YOU'LL USE THESE SIX THINGS

Projects

Skills

Connectors

Artifacts

Scheduled

Claude Code

WHAT, WHY, WHERE, WHEN & HOW

Before we build, here's the whole assignment in five plain-English lines.

WHAT

You build **one real AI-powered thing** that solves a real problem — with Claude at the core and at least **two other tools** you've learned. Someone else can use it, it lives at a **public link**, and you can show it in 3 minutes.

WHY

This is the proof you're *AI-native* — the piece that goes on your portfolio and into interviews. Judged on how **real and specific** it is, not how complex.

WHERE

Build with any tools from Sessions 1–3 (Claude + Projects / Skills / Connectors / Automations), optionally a builder like Claude Code, Lovable or Bolt. Publish to a public URL (Notion, Gamma, Artifact, Lovable, GitHub).

WHEN

One 90-minute sprint to build, then **within 48 hours**: record the demo and post it.

HOW

Pick a real problem → build it with Claude at the core + 2 other tools → make it usable + public → record a **90-second live demo** → write a **300-word brief** → post it on LinkedIn.

YOUR TOOLBOX

Six things live inside Claude. Here are the first three — the set-up tools.

Customize

[Left strip → Customize](#)

The settings room. This is where you switch apps and skills on.

- 1 Click **Customize** in the left strip.
- 2 You'll see **Connectors** (your apps) and **Skills** (your saved tricks).
- 3 Turn things on here first, then use them in a chat.

Like this — Like the settings menu in a video game — you set things up before you play.

Connectors

[Customize → Connectors](#)

A plug that lets Claude see ONE of your apps, like your Calendar or email.

- 1 Customize → **Connectors** → tap +.
- 2 Find your app, tap **Connect**, sign in and tap **Allow**.
- 3 In a chat, tap + → Connectors → switch it **on** for that chat.

Like this — Like plugging a lamp into the wall. Plug in once; flick the switch when you want light. (Claude never sees your password.)

Skills

[Type / in the chat](#)

A saved instruction you call by name. The name IS the command.

- 1 To use one, type / then its name, e.g. **/meeting-notes**.
- 2 To make one, ask Claude to “save this as a skill” and give it a short name.
- 3 Now you can call that trick any time with /.

Like this — Like a cheat-code you type to instantly do a trick, instead of explaining it every time.

YOUR TOOLBOX — PART 2

And the three you build *with* — your capstone will lean on **Projects**, **Artifacts**, and everything from Sessions 1–3.

Projects

Left strip → Projects

A folder that remembers. Everything inside shares the same memory.

- 1 Left strip → **Projects** → **New project** → name it “My Workflow Map”.
- 2 Add notes or files with **Upload**; turn on the connectors you need.
- 3 Do all your assignment chats *inside* the project so nothing is forgotten.

Like this — Like a school binder for one subject — all the right pages in one place.

Artifacts

Appears on the right when Claude builds

The thing Claude makes that you keep — a doc, a table, a little app, or your map.

- 1 Ask Claude to “make this as an Artifact.”
- 2 It opens on the right — you can edit it and it saves.
- 3 Your finished workflow map will be an Artifact.

Like this — Like your finished drawing you pin on the wall — a real thing you can keep and show.

Scheduled

Left strip → Scheduled

Jobs on a timer that run all by themselves.

- 1 Left strip → **Scheduled** → **New task**.
- 2 Say the job in plain words and pick how often (daily / weekly).
- 3 To stop it later: Scheduled → **Pause** or delete.

Like this — Like an alarm clock, but for tasks — it wakes up and does the job without you.

CONNECT TWO APPS (EXAMPLES)

A connector plugs one of your apps into Claude, so your capstone can use real material. Two common ones — pick what your solution needs:

Google Drive

So Claude can read your real documents and data as the source for your solution.

- 1 Customize → Connectors → + → find **Google Drive** → **Connect**.
- 2 Sign in and tap **Allow**.
- 3 In your build chat: + → Connectors → turn **Drive** on.
- 4 Try it: “Use the file in Drive as the base for this tool.”

Gmail

So your solution can draft or send real messages, if that's part of the job it does.

- 1 Customize → Connectors → + → find **Gmail** → **Connect** → **Allow**.
- 2 In your build chat: + → Connectors → turn **Gmail** on.
- 3 Try it: “Draft the confirmation my tool should send.”
- 4 You review before anything sends.

Safety — Claude never sees your password, nothing sends until you say yes, and keep your demo honest — never fake a result or pass a mock-up off as a real, working tool.

USE TWO SKILLS (EXAMPLES)

A skill is a saved rule-set you call with /. These two help you *ship* — the demo and the post are part of the grade.

/demo-script

Writes your 90-second demo script from your problem + solution, in a tight STAR shape.

- 1 Ask Claude: "Save this as a skill called demo-script."
- 2 Give it the STAR shape (situation → task → action → result).
- 3 Type **/demo-script** and describe your build.
- 4 You get a 90-second script you can read on camera.

/launch-post

Turns your capstone into an honest LinkedIn post — problem, what Claude does, the result, the link.

- 1 Save it with your voice + a 3-line structure.
- 2 Type **/launch-post** and paste your brief.
- 3 You get a ready-to-check post.
- 4 Keep every claim true — you post it, so you own it.

Tip — No skill yet? Ask Claude: "Save this as a skill called demo-script." Next time, **/demo-script** runs it. The name IS the command.

PICK A REAL PROBLEM, THEN BUILD

The best capstones are *specific*. Before you build, nail four things — this is your capstone in one breath.

PROBLEM

One real, specific problem — yours or someone's you know.

USERS

Who actually uses it (name a real person or group).

CLAUDE

What Claude does at the core (the smart part).

PROOF

How you'll show it works in 3 minutes.

A worked example

Problem: my aunt runs a tiffin service and loses orders that come by WhatsApp — she forgets some by evening. **Users:** her — one real person, a real business. **Claude at the core:** a Project that reads pasted WhatsApp orders and returns a clean daily order list + a prep checklist, and drafts the “order confirmed” reply. **Other tools:** Google Sheets (log orders) + a Schedule (6pm summary of tomorrow's orders). **Proof:** a public Notion page + a 90-second Loom showing a messy WhatsApp paste turn into a clean order list, live. Specific, real, useful to one real person — that beats a flashy generic app.

YOUR DEMO THE **STAR** WAY

Your 90-second Loom should tell a tiny story, and your LinkedIn post too. **STAR** is the perfect shape — script it before you record.

S**Situation**

The problem.

T**Task**

What you built.

A**Action**

Show it live.

R**Result**

The outcome.

Demo script (90 sec)

- S** “Meet my aunt, who runs a tiffin service and loses WhatsApp orders.”
- T** I built a Claude order-catcher.
- A** Paste a messy WhatsApp thread live → a clean order list + prep checklist appear.
- R** “No lost orders; her evenings are calmer.”

LinkedIn post

- S** I spent a weekend on a real problem.
- T** Share what I built.
- A** 3 lines — the problem, what Claude does, the result; link the public URL; keep every claim true.
- R** A post that shows I’m AI-native.

YOUR CAPSTONE SUBMISSION

Four things to hand in within 48 hours. Tick each — this is the proof, not just the build.

**Public URL**

Notion / Gamma / Artifact /
Lovable / GitHub

Notion page — the tiffin order-catcher, anyone can open

**90-second Loom**

problem → Claude solution →
output, live only

Live paste → clean order list, 85 seconds

**300-word brief**

the problem, your solution, the
result

One-pager: problem, tools used, what changed

**LinkedIn post**

within 48 hours, honest claims

Posted — problem, Claude's job, result, link

JUDGED ON (NOT COMPLEXITY)

1. Specificity — one real, named problem
2. Real-world use — someone can actually use it
3. Claude at the core + 2 other tools

WHAT TO SUBMIT

A **public URL** + a **90-second Loom** (live demo only) + a **300-word brief** + a **LinkedIn post** within 48 hours. This is **Portfolio asset #4 — your capstone**.

NOW BUILD IT IN CLAUDE

Here's the order to build and ship your capstone.

- 1 Pick one **real, specific problem** for a named user.
- 2 Build it with **Claude at the core** + 2 other tools (Projects, Skills, Automations, or a builder).
- 3 Make it **usable** and publish to a **public URL**.
- 4 Record a **90-second live Loom** (problem → Claude → output).
- 5 Write a **300-word brief** and post on **LinkedIn** within 48 hours.

WHAT GOOD LOOKS LIKE — GRADING

- ✓ Solves one **real, specific** problem for a named user.
- ✓ **Claude at the core** + at least two other program tools.
- ✓ Actually **usable by someone else** and live at a **public URL**.
- ✓ A **90-second live** demo, a 300-word brief, a LinkedIn post.
- ✓ Demo shows **problem** → **Claude** → **output** in 3 minutes.

YOU'RE DONE WHEN

- ☐ One real solution: Claude at the core + 2 tools, usable by someone else.
- ☐ A public URL + a 90-second live demo.
- ☐ A 300-word brief and a LinkedIn post within 48 hours.

COMMON MISSES TO FLAG

- ✗ A vague, generic idea (“an AI app for everything”).
- ✗ Claude bolted on the side, not at the core.
- ✗ Nothing anyone else can open or use.
- ✗ A demo that *tells* instead of *shows* — no live output.

That's your capstone — the proof you're AI-native. Put it on your portfolio and in your interviews.
