

● SESSION 4 · COMPANION E-BOOK

BUILD SPRINT.

*Ship Something Real. Own the Proof.
— where you stop guessing about AI
and start operating it.*

ONE LIVE SESSION

Vibe coding, capstone sprint, Demo Day
& career.

FOR EVERYONE

Written for total beginners and working
professionals at once.

YOU LEAVE WITH

A shipped, shareable capstone — and a
portfolio to prove it.

WELCOME TO SESSION 4

WEEKLY OBJECTIVE

You can drive Claude, connect it and automate it. This session you build — a real tool with no code, ship a capstone in one sprint, demo it live, and rewrite how you show the world you are AI-native. You leave with proof, not just skills.

Identity shift — Systems Working for You → AI-Native Operator

THE TWO HALVES OF SESSION 4

FIRST HALF

BUILD & SHIP

Vibe code a real tool with no code, then run a 20-minute sprint that turns your Session 1–3 work into one capstone.

SECOND HALF

DEMO & POSITION

Present your build, take and give sharp feedback, then rewrite your resume and LinkedIn so “AI-native” means something specific.

HOW EVERY TOPIC IS BUILT

This is your Session 4 companion — read it alongside the live class. It is written for two people at once: the total beginner who has never built anything, and the professional ready to ship. Skim the plain-English parts; stop on the prompts and the build steps.

WHAT	A plain-English definition of the idea.
WHY	Why it matters to you as an operator.
WHERE	Where you actually do it — the tool or the moment.
WHEN	When it works well — and when it does not.
HOW	How it works in practice, still in plain words.

Every topic also carries: advantages and disadvantages, a real example, three professional prompts at three levels, step-by-step build-up and execution, and the odd Fun Fact.

WHAT'S IN THIS SESSION

A full tour of the Claude app (3 pages), then the four topics of Session 4, then your session deliverable. Jump to whatever you need.

◆	Getting around Claude	p. 4
	The whole interface + how to connect & automate	
4.1	Vibe Coding	p. 7
	Build real, working tools by describing what you want — no syntax, no setup.	
4.2	Capstone Build Sprint	p. 10
	Ship in 20 minutes — combine your Session 1–3 work into one real thing.	
4.3	Demo Day	p. 13
	Present in three minutes, take sharp feedback, and learn to talk about your process.	
4.4	AI-Native Career Positioning	p. 16
	Make “AI-native” mean something specific on your resume, LinkedIn and portfolio.	
★	Capstone — AI-Powered Solution	p. 19
	Your Session 4 deliverable	

BEFORE YOU START · THE CLAUDE-FIRST TOUR

GETTING AROUND CLAUDE

This whole program runs on Claude. Learn the app once — here is the entire window, every part labelled.

THE CLAUDE APP — LEFT SIDEBAR, TOP BAR, CHAT (CENTRE), MESSAGE BOX (BOTTOM), AND THE LIVE PANEL (RIGHT)

THE LEFT SIDEBAR — WHERE YOU MOVE BETWEEN KINDS OF WORK

New — Start a fresh chat or Cowork session. Nothing carries over unless the session shares a Project.

Artifacts — Your gallery of built pages and docs (dashboards, mini-apps, reports) that live on beyond the chat and can be re-opened or shared.

Dispatch — Hand a job to a background agent that plans and runs it while you do other things. (Beta.)

Projects list — Your projects pinned for quick access; click one to jump straight into its space.

Projects — Your Projects — shared folders of chats, files and instructions that persist across sessions and your team.

Scheduled — Tasks that run on a schedule — hourly, daily, weekly. View, pause, edit or run them here.

Customize — Your home for connectors, custom instructions, styles and preferences — set once, applies everywhere.

Account · plan — Bottom-left: who you are and your plan (e.g. Max). The download icon gets the desktop app.

THE TOP BAR — WHERE YOU ARE, AND HOW TO GET AROUND

Chat · Cowork / Code — The mode switch. “Chat & Cowork” for everyday work with files and tools; “Code” opens Claude Code, the developer surface.

Back / forward — Move through screens you have visited, like a browser.

Panel & theme — Top-right icons: show or hide the side panels and switch light / dark.

Search — Find any past chat, project or output by keyword.

Breadcrumb — Shows where you are (e.g. Playbooks / Frontend design...). Click a crumb to go up a level.

THE MESSAGE BOX — HOW YOU BRIEF CLAUDE AND CONTROL IT

The “+” — Add connectors, upload files, and switch on skills for this message.

Approval: Manual / Auto / Skip — When Claude asks before acting. Manual = approve every action; Auto = auto-approves reads, checks writes; Skip = no prompts (trusted work only).

Model · reasoning — Pick the model (e.g. Opus 4.8) and the thinking effort — High for hard problems, lower for speed.

Add folder — Give the session a folder from your computer to read and write — pick the smallest folder that holds what is needed.

Dictate — The mic — talk instead of type.

THE PANEL ON THE RIGHT — WHAT CLAUDE SHOWS YOU WHILE IT WORKS

Progress — The live task list — every step Claude is taking, ticking off as it goes.

Browser · Claude in Chrome — The browser Claude is driving for web tasks, when a browser is connected.

Connectors — The apps switched on for this session (e.g. Web search); add more from “+” or Customize.

Outputs — The finished files from this session — open, preview, download, or send some to Drive.

Context — What this session can see — the connected Project and folders (e.g. Playbooks).

Skills — The packaged know-how Claude can apply here on demand.

◆ FIND IT IN CLAUDE

Message box → Manual / Auto / Skip

Set the approval mode before a big task. New to Cowork? Start on **Manual** so you approve each action. As you trust a routine, move to **Auto**. Keep **Skip** for small, contained jobs only.

THE THREE THINGS THAT TURN CLAUDE FROM A CHATBOT INTO A WORKSPACE

Anyone can type into Claude. The step up is **connecting your own apps**, **putting work on repeat**, and **handing off jobs to the background**. Here is where each lives and how to switch it on.

1

CONNECT YOUR APPS

CONNECTORS

A connector plugs one of your apps — Gmail, Google Drive, Notion, Slack, and hundreds more — straight into Claude, so it can read and act on that data instead of you copy-pasting.

- 1 Open Settings → Connectors (or, in a chat, click “+” → Connectors → Manage connectors).
- 2 Click the “+” next to Connectors to open the directory, then pick the app you want.
- 3 Click Connect, then sign in and approve access in the pop-up (this is OAuth — you approve, Claude never sees your password).
- 4 Back in any chat, click “+” → Connectors and toggle the app on for that conversation.

Free, Pro, Max, Team & Enterprise. Team/Enterprise: an Owner enables a connector for the org first. Choose the least access that does the job.

2

PUT WORK ON REPEAT

SCHEDULED TASKS

A scheduled task is a prompt Claude runs on its own on a set cadence — a Monday digest, a daily inbox triage — and reports back with no nudge from you.

- 1 In the left sidebar, click Scheduled.
- 2 Click New task → Create with Claude (guided) or Set up manually.
- 3 Write the prompt as a full standalone instruction, pick the cadence (hourly / daily / weekly / weekdays), and set the approval mode + folder.
- 4 Click Schedule. Pause, edit, or run it on demand any time from the same page.

Pro, Max, Team & Enterprise. Desktop for all paid plans; web & mobile in beta.

3

HAND OFF, WALK AWAY

DISPATCH

Dispatch is a background agent. You describe an outcome once; it breaks the job into tasks, runs each on its own, and surfaces the results later — even from your phone.

- 1 In the left sidebar, select Dispatch.
- 2 Describe the outcome like you would brief a colleague, in one message.
- 3 Let it plan — it starts child tasks that each show a status (Running, Awaiting input, Completed...).
- 4 Check back later: open any task to read the transcript and grab the files it produced.

Pro & Max, on the latest Claude Desktop (macOS/Windows). Keep the desktop app open to assign from mobile.

4.1 SESSION 4 VIBE CODING

*Build real, working tools by describing what you want —
no syntax, no setup.*

The vibe-coding loop — no syntax needed

WHAT

Vibe coding is building software by *describing intent* and iterating on what the AI produces, instead of writing code. The loop is five steps: **describe** → **generate** → **test** → **refine** → **ship** — repeated until it works. No knowledge of syntax required.

WHY

It collapses “I have an idea for a tool” into “here is the working tool” — from a developer’s days to your afternoon. For a non-coder, domain knowledge plus AI execution often beats a junior dev who lacks your context.

WHERE

In build tools that generate apps from a prompt: **Lovable** and **Bolt.new** (full apps), **v0** (UI components), **Replit AI** (browser IDE), and **Claude Code** as your reasoning partner for framing and debugging.

WHEN

Vibe coding shines for **MVPs, internal tools, dashboards, forms, calculators and landing pages**. It breaks down on complex logic, security-sensitive systems, and production apps at scale — there, treat it as a first draft, not the finish line.

HOW IT WORKS

You write a prompt with four parts — **context + functionality + constraints + example behaviour** — and generate. Then you iterate in a repeatable pattern: “this is almost right — change X, keep Y, add Z.” When something errors, you paste the error, describe what you expected, and let Claude fix it — no need to read the code.

ADVANTAGES

- + Turns an idea into a working tool in minutes
- + No syntax, no local setup to fight with
- + Your domain knowledge is the real advantage

DISADVANTAGES

- Breaks down on complex or security-critical logic
- Vague prompts produce generic, throwaway output
- Not production-grade at scale without real engineering

EXAMPLE

You have always wanted a **client intake form** that scores leads. In Lovable you describe it in plain English; in five minutes you have a working React app. Three iterations later — “add a priority score, keep the layout, make it mobile” — it is live on a URL you can share.

Fun Fact

The non-coder's edge is real: a marketer who knows exactly what a campaign dashboard needs, paired with AI that writes the code, routinely ships something more useful than an engineer who has never run a campaign.

◆ FIND IT IN CLAUDE

Paste the error → describe what you expected

Debug without reading code. When a vibe-coded build errors, paste the **error message** back to Claude, say what you expected to happen, and let it fix the code. You never need to read the code yourself.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

I want to build a small tool for who it is for. In plain English, help me write my first prompt for Lovable: what the tool does, what it should look like, and the one thing it must get right.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as my build partner. Here is my tool idea: describe. Write a vibe-coding prompt with four parts – context, functionality, constraints, example behaviour – then list the first 3 iterations I should make after the first version generates.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as my technical co-founder. I am non-technical. For tool, give me: the build prompt, the 5-step describe-generate-test-refine-ship plan, the 3 places this approach will break, and exactly what to paste back to you when I hit an error.

BUILD IT UP — STEP BY STEP

- 1 Pick a small, specific tool you have always wanted for your work or study.
- 2 Open **Lovable** or **Bolt.new** and write a specific first prompt — who it is for, what it does, how it looks.
- 3 Iterate at least 3 times; each time note what changed and the exact prompt you used.
- 4 When it works, share the live URL with one person outside the cohort.

EXECUTE IT

- 1 Keep prompts specific — vague in, generic out.
- 2 Debug without reading code: paste the error, say what you expected, let Claude fix it.
- 3 Get one line of written feedback from your outside tester.
- 4 Share the live URL + your 3 iteration prompts in Discord #show-your-work.

4.2

SESSION 4

CAPSTONE BUILD SPRINT

Ship in 20 minutes — combine your Session 1–3 work into one real thing.

20-minute sprint — finish, cut, defer, then ship

**WHAT**

The **capstone** is one AI-powered solution to a real problem, built with Claude at the core plus at least two other tools from the program. The **20-minute sprint** is a framework for finishing: decide what to **finish**, what to **cut**, and what to **defer** — then ship.

WHY

A portfolio piece beats a certificate. The capstone is the thing you point to in an interview or a client pitch — proof you can take a real problem and solve it with AI, end to end. Shipping something small and real beats planning something big you never finish.

WHERE

You pull together what you already built — an Artifact, a workflow, an automation from Sessions 1–3 — and package it as a capstone: an AI research system, a connected workflow engine, an automation suite, or a vibe-coded tool.

WHEN

Sprint when you have parts already built and need to *finish*, not invent. The sprint framework is for the last mile: it exists to stop you polishing forever and force a shippable version out the door.

HOW IT WORKS

Set a 20-minute timer. List what “done” means, then ruthlessly sort every remaining task into finish / cut / defer. Build criteria are fixed: it must use Claude plus 2+ tools, solve a real problem, and be publicly shareable. Then record a 90-second Loom — live demo, no slides — and write a 3-sentence summary.

ADVANTAGES

- + Forces a finished, shareable thing — not a plan
- + Reuses work you already did across the program
- + A real portfolio asset you can show anyone

DISADVANTAGES

- Scope creep kills it — the timer is the discipline
- Complexity is not the goal; specificity is
- Needs a real problem, not a demo-for-demo's-sake

EXAMPLE

You combine your Session 2 research pipeline and your Session 3 morning-brief Schedule into a “**Daily Market Brief**” tool for your niche — Claude researches, the Schedule delivers, an Artifact presents it. One public URL, one 90-second Loom, done inside the sprint.

Fun Fact

A 20-minute limit sounds too short to build anything real. It is exactly the point — the constraint is what forces the scope down to something you can actually finish, and finished-and-small always beats grand-and-imaginary.

◆ FIND IT IN CLAUDE

Message box → Artifact appears beside the chat

Publish the capstone as an Artifact. Ask Claude to package your capstone summary as an **Artifact**, or publish to a login-free URL (Notion, Gamma, Lovable). Find your saved ones under **Artifacts** in the sidebar.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Here is what I built in Sessions 1-3: list. Help me combine them into one small capstone that solves a real problem. Suggest 3 options and tell me which is most shippable in 20 minutes.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as my sprint coach. My capstone is idea. Give me a 20-minute plan: what to finish, what to cut, what to defer. Then write my 3-sentence project summary — problem, how Claude is used, outcome.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as a product reviewer. For my capstone describe, pressure-test it: is the problem real, is Claude genuinely at the centre, is it shippable and shareable? Give me the one cut that most improves it, and a 90-second Loom script: problem → solution → live demo → result.

BUILD IT UP — STEP BY STEP

- 1 Choose the capstone shape that fits what you already built (research, workflow, automation, or vibe-coded tool).
- 2 Set a 20-minute timer and sort every task into **finish / cut / defer**.
- 3 Meet the criteria: Claude + 2 tools, a real problem, publicly shareable.
- 4 Record a 90-second Loom — live demo only, no slides.

EXECUTE IT

- 1 Write a 3-sentence summary: problem, how Claude is used, outcome.
- 2 Publish it to a login-free public URL (Notion, Gamma, Artifact, Lovable, GitHub).
- 3 Cut anything that does not serve the core problem — ship the rest.
- 4 Submit the public URL + Loom + summary before the Demo Day segment.

4.3

SESSION 4

DEMO DAY

Present in three minutes, take sharp feedback, and learn to talk about your process.

The 3-minute demo — four beats, in order

WHAT

Demo Day is a live showcase with a fixed structure: **Problem** (30s) → **Solution** (60s) → **Live demo** (2 min) → **Result + metric** (30s). Feedback follows a protocol: one thing that worked, one thing to improve, one question.

WHY

Being able to *present* AI work is a skill of its own — in a job or a client context you will be asked “how do you use AI?”, and a crisp answer about your process is worth more than the output alone. Demoing well is how skills become opportunities.

WHERE

Live, in front of the cohort — and then everywhere you talk about your work: interviews, pitches, a portfolio walkthrough. The same four-part structure works in all of them.

WHEN

Use the structure any time you show AI work to someone who decides something — a manager, a client, an interviewer. Lead with the problem, not the tool; end with a result, not a feature tour.

HOW IT WORKS

You rehearse the four beats until they are tight, then demo live rather than showing slides. When you give feedback you use the protocol so it is useful, not vague. When you take questions, you talk about your *process* — the workflow and judgement — not just the final screen.

ADVANTAGES

- + A repeatable structure that works in any room
- + Trains you to talk process, which is what convinces
- + Peer feedback surfaces the fix you could not see

DISADVANTAGES

- A feature tour with no problem framing falls flat
- Live demos can break — rehearse and have a backup
- Vague feedback helps no one; use the protocol

EXAMPLE

You open: “Freelancers lose an hour a day triaging client emails.” (problem) → “I built a Claude routine that drafts replies.” (solution) → you run it live on a real inbox (demo) → “It cut my triage from 60 minutes to 10.” (result). Four beats, three minutes, memorable.

Fun Fact

The strongest demos spend the first thirty seconds on the problem and never mention the AI tool by name until the demo itself. People remember the problem you solved, not the model you used.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Help me script a 3-minute demo of my project describe using this structure: Problem 30s, Solution 60s, Live demo 2 min, Result 30s. Keep it plain and confident.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as a demo coach. Here is my project describe and result metric. Tighten my opening problem line so it lands in 10 seconds, and give me 3 likely questions plus strong answers about my AI process.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as a technical interviewer. After my demo of project, ask me 3 hard questions about my AI workflow — where judgement was mine vs the model's, what I would do differently, and how I know it works. Then critique my answers.

BUILD IT UP — STEP BY STEP

- 1 Script the four beats: Problem 30s, Solution 60s, Live demo 2 min, Result 30s.
- 2 Rehearse until the live demo runs clean; prepare a backup screenshot.
- 3 Give peers feedback with the protocol: 1 worked · 1 to improve · 1 question.
- 4 Note the one improvement your peers surfaced.

EXECUTE IT

- 1 Lead with the problem and a real metric, not a feature list.
- 2 Talk about your **process** when questioned — workflow and judgement.
- 3 Within 48 hours, post about it on LinkedIn (Hook · Problem · How you used AI · Result · CTA).
- 4 Tag Menler AI Kickstarter; attach your Loom or a screenshot.

4.4

SESSION 4

AI-NATIVE CAREER POSITIONING

Make “AI-native” mean something specific on your resume, LinkedIn and portfolio.

Proof-of-work, across three surfaces

BEFORE

"Passionate about leveraging AI"

AFTER

"Built 3 Claude systems · ~5 hrs saved/wk"

Resume

LinkedIn

Portfolio

WHAT

AI-native positioning is showing AI skill as **proof-of-work, not proof-of-title**: specific tools, specific outcomes, real workflows — not “proficient in AI”. It runs across three surfaces: your **resume** language, your **LinkedIn** About section, and a scannable **portfolio** page.

WHY

“AI-native” on a resume is generic and everyone claims it; specificity is credibility. The people who get hired and hired-well are the ones who can point to workflows they built and outcomes they produced — exactly the deliverables you have from this program.

WHERE

Your LinkedIn **headline** and **About** section, your resume bullets, and a portfolio page (Notion, Gamma, or LinkedIn Featured) holding your three deliverables: Workflow Map, Connected Workspace, Automation System.

WHEN

Update all three the moment you have real proof — which is now. Refresh them whenever you ship something new. Lead with outcomes and tools used; cut anything that reads like a certificate list.

HOW IT WORKS

You rewrite each surface around **tools used + outcomes produced**. Resume bullets go from “familiar with AI tools” to “built a Claude automation that cut reporting from 3 hours to 20 minutes”. You use Claude to draft and refine all three — and share the exact prompts, because your process is part of the proof.

ADVANTAGES

- + Specific proof beats generic claims every time
- + Turns your program deliverables into career assets
- + Scannable portfolio makes your work easy to believe

DISADVANTAGES

- Vague “AI-savvy” language actively weakens you
- A portfolio with no real inputs looks like practice
- Certifications alone are not proof-of-work

EXAMPLE

Before: “Passionate about leveraging AI.” After: “I run a Claude workspace that automates my weekly reporting and research — three live systems, ~5 hours saved a week. Portfolio below.” One is noise; the other gets a reply.

**Fun Fact**

Recruiters skim a profile in about seven seconds. In that window, “built a Claude system that saved 5 hours a week” survives and “AI enthusiast” does not — because one is a result and the other is a hope.

◆ FIND IT IN CLAUDE[Sidebar](#) → [Projects](#) → [New project](#)

Draft all three profiles in a Project. Make a Project holding your 3 deliverables, then have Claude rewrite your headline, About section and portfolio blurbs from them. Keep the prompts — your process is part of the proof.

THREE PROFESSIONAL PROMPTS, THREE LEVELS

LEVEL 1 · BEGINNER

FILL THE ORANGE

Rewrite my LinkedIn headline to include one specific AI skill or tool I now use. My role is role; the tool is tool; the outcome is what I produced. Give me 3 options.

LEVEL 2 · INTERMEDIATE

FILL THE ORANGE

Act as a career writer. Rewrite my LinkedIn About section in 3-5 sentences: my domain X, how I use AI in it, and one concrete outcome I produced. Specific and credible, no hype.

LEVEL 3 · PROFESSIONAL

FILL THE ORANGE

Act as a hiring manager for target role. Review my 3 deliverables [Workflow Map, Connected Workspace, Automation System]. Tell me how to frame each on a portfolio page for maximum credibility, and rewrite one resume bullet per deliverable as proof-of-work with a measurable outcome.

BUILD IT UP — STEP BY STEP

- 1 Rewrite your LinkedIn **headline** to name one specific AI skill or tool you now use.
- 2 Rewrite your **About** section (3–5 sentences): domain, how you use AI, one outcome.
- 3 Build a portfolio page with your 3 deliverables: Workflow Map · Connected Workspace · Automation System.
- 4 Use Claude to draft and refine all three — and keep the prompts.

EXECUTE IT

- 1 Frame every line as tools used + outcome produced, never proof-of-title.
- 2 Cut certificate-speak; add a real number wherever you can.
- 3 Prepare your answer to “how do you use AI in your work?” — a workflow, not a tool name.
- 4 Share your updated headline + About screenshot in Discord #show-your-work.

YOUR SESSION 4 DELIVERABLE

CAPSTONE — AI-POWERED SOLUTION

The one thing to build this session — it is your portfolio capstone.

IMAGE PLACEHOLDER — GENERATE & DROP IN

A hero image for your capstone / portfolio cover

STRUCTURED PROMPT FOR CHATGPT / GEMINI / FIREFLY

SUBJECT	a single finished product screen glowing on a pedestal, “shipped”	OBJECT	a small public-link badge and a play button beneath it, three faint tool icons feeding in from behind
ENVIRONMENT	deep-navy showcase backdrop, soft spotlight, empty space along the top for a title	SITUATION	a launch moment — the build presented, live and shareable
REFERENCE	clean flat-vector product-launch illustration, modern tech-brand style	COLOUR STYLE	deep navy base, warm orange accents, small teal & purple highlights, high contrast
MOTION STYLE	still (for a video cover: a slow spotlight reveal of the product)	GEOMETRY STYLE	centered hero product, generous negative space at top, minimal, 3:2

BRIEF	Build one AI-powered solution to a real problem — with Claude at the core and at least two other program tools. It must be usable by someone else, shareable via a public URL, and demonstrable in 3 minutes. Judged on specificity and real-world application, not complexity.
SUBMIT AS	A public URL (Notion, Gamma, Artifact, Lovable, or GitHub) + a 90-second Loom (problem → Claude solution → output, live only) + a 300-word brief + a LinkedIn post within 48 hours. Portfolio asset #4 — your capstone.
TIME	90 minutes
TOOLS	Any combination from Sessions 01–03 · Claude Code / Lovable / Bolt (optional for builders)
FEEDS INTO	This is the piece that goes on your portfolio and into interviews — the proof that you are AI-native.

◆ FIND IT IN CLAUDE

Message box → Artifact appears beside the chat

Publish the capstone to a public URL. Package your capstone as an **Artifact** or publish to a login-free link (Notion, Gamma, Lovable) — this is portfolio asset #4, the one you demo.

SESSION 4 OUTCOME

YOU SHIPPED.

A real tool built with no code, a shipped capstone demoed live, and a resume, LinkedIn and portfolio that show — specifically — that you are AI-native.

Four projects. Two weekends. One portfolio. You did not just learn AI — you shipped with it.

Systems Working for You → AI-Native Operator

PROGRAM COMPLETE

Four projects, two weekends, one portfolio. You have a workflow map, a connected workspace, an automation suite, and a shipped capstone. You did not just learn AI — you built with it, in public. Now keep shipping.

menler

Your turning point in the AI era.
