CLAUDE-FIRST FELLOWSHIP · WEEK 1

INSTRUCTIONS

My AI Landscape Report

Your own map of the Gen AI landscape — 12 tools, 6 categories, and a clear “which tool, when”.

Week 1 · Claude · Perplexity · NotebookLM · Hugging Face

Your turning point in the AI era.

W1

My AI Landscape Report

The brief — what you're building and why

WHAT YOU'LL BUILD

A structured report that maps 12 real AI tools across 6 categories — what each is for, where it wins, what it costs, and which one you'd actually reach for on a given job. It's your personal decision map for the whole Gen AI landscape.

- 12 tools grouped into 6 clear categories
- For each: what it's for, its strengths, its limits, and price
- A "which tool, when" decision guide
- Grounded in real testing and sources — not hype

WHY IT MATTERS

The landscape is loud and every tool claims to be the best. The first real skill of an AI generalist is judgment: knowing which tool fits which job. This build trains you to evaluate, not follow the hype — the foundation for everything else in the Fellowship.

WHERE IT RUNS

Claude structures the report; Perplexity researches current tools and pricing; NotebookLM grounds you in official docs; Hugging Face shows the open-model ecosystem behind the apps.

WHEN TO BUILD & USE IT

Week 1 of the Fellowship. Build it as your foundation and refresh it whenever a major new tool lands.

HOW TO APPROACH IT

The method — *step by step*

These are the moves, not the answers. Work through them in order; the worked solution lives in the separate Solution guide.

1. Pick 6 categories that matter to your work — e.g. chat & reasoning, search, images, video, audio, automation.
2. Choose 2 real tools per category (12 in total) — a mix you'd genuinely consider.
3. Research each with Perplexity and, where you can, try it: note what it's for, its strengths, its limits, and price.
4. In Claude, structure everything into a clean comparison and a short verdict per category.
5. Finish with a one-look "which tool, when" guide for your real tasks.

REQUIREMENTS

- 6 categories × 2 tools = 12
- Each tool tied to a real use-case and a "use it when"
- A decision guide, plus sources
- Kept to 1–2 pages — a map, not an essay

HAND IN

A 1–2 page AI Landscape Report — 12 tools, 6 categories, and a which-tool-when guide.

A LITTLE HINT

Judge each tool against a real task you have, not its feature list. "Which would I actually use for X?" beats any spec sheet.
