CLAUDE-FIRST FELLOWSHIP · WEEK 1

SOLUTION

My AI Landscape Report

Your own map of the Gen AI landscape — 12 tools, 6 categories, and a clear “which tool, when”.

Week 1 · Claude · Perplexity · NotebookLM · Hugging Face

Reference build — yours can differ.

W1

My AI Landscape Report

How it's executed

THE EXECUTION — HOW, WHERE & WHEN

You research with Perplexity (current capabilities, pricing, sources), optionally ground the official docs in NotebookLM, take a quick look at Hugging Face to see the open-model ecosystem underneath the apps, and use Claude to structure all of it into one comparison plus a decision guide. Roughly an hour of real work; a map you'll reuse for months.

WHAT TOOLS — AND THEIR ROLE

Claude	Structures the research into a clean comparison + decision guide
Perplexity	Current, cited research on each tool and its pricing
NotebookLM	Grounds you in official docs so claims are accurate
Hugging Face	Shows the open models and demos behind the branded apps

THE WORKED SOLUTION

Do it — *step by step (1 of 2)*

A full pass — a marketer mapping their AI toolkit, click by click.

1 Set up the workspace & pick 6 categories

DO THIS

- Claude → Projects → "+ New project" → name it "AI Landscape".
- Open Perplexity in another tab (the free tier is enough to start).
- Choose 6 categories that match your real work — e.g. Chat · Search · Images · Video · Audio · Automation.

Done when: you have 6 category headings written down.

Tip — pick categories by the jobs you actually do, not by what's trending.

2 Choose your 12 tools

DO THIS

- For each category pick 2 tools you would genuinely consider.
- Mix one you already know with one you've only heard of.

PASTE THIS

```
Perplexity → "What are the 2 leading [category] AI tools in 2026 for [my use]? One line
each, with a source."
```

Done when: you have a 6 × 2 list — 12 tools in all.

3 Research each tool — the core work

DO THIS

- For every tool, capture 4 fields: what it's for, its top strength, its main limit, its price.
- Keep the source link behind every claim.

PASTE THIS

```
Perplexity → "[Tool]: what is it best for, its biggest limitation, and its 2026 pricing?
Cite sources."
```

Done when: every tool has all 4 fields and a source.

Tip — if Perplexity's sources disagree, note it — that's a finding, not a failure.

THE WORKED SOLUTION

Do it — *step by step (2 of 2)*

4 Confirm the prices in NotebookLM (optional, but strong)

DO THIS

- NotebookLM → New notebook → Add sources → paste each tool's official pricing / docs page.
- Ask "what's the exact free-tier limit for each?" — the answers cite the doc.

Done when: your price and limit fields are backed by official docs, not blog posts.

5 See what's open — Hugging Face

DO THIS

- huggingface.co → Models → filter by task (Text, Image, Audio).
- Note the leading open model per category.

Done when: you can name, per category, "the open alternative is ___".

Tip — open models are your real answer on cost and privacy — not just brand names.

6 Build the report in Claude

DO THIS

- In your "AI Landscape" Project, paste all your notes.
- Ask Claude to structure them (this is the ADVANCED prompt on the STAR page).

PASTE THIS

```
"Turn my notes into a 1-page report: a comparison table (tool · category · use · strength · limit · price), a which-tool-when guide, and a one-line verdict per category. Keep my [n] sources."
```

Done when: you have a 1–2 page report you could hand to a colleague.

YOUR OUTPUT — the decision guide (excerpt)

Category	Pick	Use it when
Search	Perplexity	you need fast, cited answers
Deep research	Claude + NotebookLM	you have your own sources to ground
Brand images	Firefly	you need commercial-safe art

TOOL OVERVIEW

What you'll find *where*

Perplexity

Search bar	Ask "X vs Y for [use-case], 2026, with sources"; pick a Focus
Sources strip	Numbered citations under each answer — your evidence trail
Spaces	Keep one "AI tools" Space so every thread stays together

Hugging Face

Models	Browse by task (text, image, audio) to see what's open and current
Spaces	Try live demos of a model before you judge it
Datasets	See what a model was trained on — a clue to its strengths

MAKE IT REUSABLE

Connect it *& automate it*

The build is worth more when it plugs into your real tools and runs itself. Here's exactly where to click.

CREATE A SKILL

Where: Customize → Skills · in Cowork: "+" → Record a skill

1. Record: "+" → Record a skill → do the task once → Save — Claude writes the SKILL.md for you.
2. Or write it: a SKILL.md with a name, a one-line description (that's the trigger), and 5–8 rules.
3. Zip the folder (folder as the root) → Customize → Skills → Upload → enable.
4. Run it with /your-skill; edit and re-upload to improve it.

For this project: Save your report structure as /landscape-report so a refresh is one click.

A Skill is a saved recipe Claude reloads every time — so you never re-explain.

CONNECT A CONNECTOR

Where: Customize → Connectors (or "+" in the message box → Connectors → Manage)

1. Pick the app from the directory — Google Drive, Gmail, Notion and more.
2. Click Connect and approve in the app's own sign-in window (OAuth).
3. Grant the least access it needs; you can turn it on per chat.
4. In a chat, toggle it on and ask Claude to use it.

For this project: Connect Google Drive so the finished report is stored and shareable.

Claude never sees your password — and it never sends or changes anything until you say yes.

PROMPT LIBRARY · STAR

Write it in *STAR*

STAR = Situation · Task · Action · Result. Same four parts every time — start at your level and add detail as you climb.

BASIC

- S **Situation.** I'm comparing AI tools.
- T **Task.** List some worth knowing.
- A **Action.** Name a few per category.
- R **Result.** A short starter list.

INTERMEDIATE

- S **Situation.** I have 6 categories that matter to me.
- T **Task.** Recommend 2 tools in each.
- A **Action.** Say what each is for and when to use it.
- R **Result.** A simple comparison table.

ADVANCED

- S **Situation.** I've researched 12 tools with notes [paste].
- T **Task.** Turn them into a decision guide.
- A **Action.** Compare on use-case, strengths, limits and price; keep my sources as [n].
- R **Result.** A one-page "which tool, when" guide.

PRO

- S **Situation.** I refresh this landscape often.
- T **Task.** Keep my report current.
- A **Action.** Re-research with live web, flag new tools and price changes, keep my categories and format.
- R **Result.** An updated report + a short "what changed". (Save as /landscape-report.)

WHY IT MATTERS

Where this pays off *in real life*

This isn't a toy exercise. The same build, pointed at real work, does this:

- Choosing the right tool for any task, fast
- Onboarding a team onto AI without the hype
- Vendor and tool evaluation at work
- A reference you refresh as the field moves
- Advising clients or peers on what to use

WHAT GREAT LOOKS LIKE

- Every pick is tied to a real use-case, not features
- There's a clear "which tool, when" a beginner could follow
- Claims are sourced — you can defend every line
