CLAUDE-FIRST FELLOWSHIP · WEEK 2

INSTRUCTIONS

My Claude OS — First Build

Turn Claude from a chat box into the operating system that runs your whole workflow.

Week 2 · Claude — Projects · Connectors · Schedules · Plugins · Routines

Your turning point in the AI era.

W2

My Claude OS — First Build

The brief — what you're building and why

WHAT YOU'LL BUILD

Your personal Claude operating system: three configured Projects (work, research, creative), each with its own system prompt, a live connector into your real data, a running Schedule, an installed Plugin, and a Routine that chains three or more steps. The setup that runs your entire AI workflow instead of one chat at a time.

- 3 role-specific Projects: work, research, creative
- A system prompt for each — the config that shapes every chat
- A live connector (Notion or Drive) into your real docs
- A Schedule, a Plugin, and a Routine chaining 3+ steps

WHY IT MATTERS

One-off chats don't scale. Turning Claude into a configured OS is the leap from "using AI" to "running on AI" — where setup does the remembering and the work compounds. This is the core Week-2 skill and the home every later project lives in.

WHERE IT RUNS

Entirely inside Claude — Projects, System prompts, Connectors, Schedules, Plugins, and Routines.

WHEN TO BUILD & USE IT

Week 2 of the Fellowship. Build it once; it becomes the base you return to for every project after.

HOW TO APPROACH IT

The method — *step by step*

These are the moves, not the answers. Work through them in order; the worked solution lives in the separate Solution guide.

1. Create three Projects — Work, Research, Creative — so each has its own space.
2. Write a system prompt for each: Persona · Context · Rules · Never-do, tied to tasks you actually do weekly.
3. Connect Notion (or Drive) into one Project so it reads your real documents.
4. Set up one Schedule — e.g. a Monday brief that runs itself.
5. Install one Plugin, then build one Routine that chains three or more steps.
6. Document the whole setup with screenshots.

REQUIREMENTS

- 3 Projects, each with its own system prompt
- 1 live connector
- 1 Schedule that actually runs
- 1 Plugin + 1 Routine chaining ≥3 steps
- Screenshots documenting each piece

HAND IN

Your Claude OS — 3 Projects documented with screenshots (system prompts + connector + schedule + plugin + routine).

A LITTLE HINT

Write each system prompt around a real weekly task, not in the abstract. The OS is only as good as the jobs you point it at.
