CLAUDE-FIRST FELLOWSHIP · WEEK 2

SOLUTION

My Claude OS — First Build

Turn Claude from a chat box into the operating system that runs your whole workflow.

Week 2 · Claude — Projects · Connectors · Schedules · Plugins · Routines

Reference build — yours can differ.

W2

My Claude OS — First Build

How it's executed

THE EXECUTION — HOW, WHERE & WHEN

You set up three Projects, each carrying a system prompt structured as Persona · Context · Rules · Never-do, then wire a Notion connector into one so it works from your real docs. You schedule a recurring task, install a plugin, and build a routine that chains steps (e.g. research → draft → save). Documented with screenshots, it's a working personal AI operating system — not a pile of chats.

WHAT TOOLS — AND THEIR ROLE

Claude Projects	Three role-specific spaces that keep context and config
System prompts	The instructions that shape every chat in a Project
Connectors	Wire real data (Notion / Drive) into a Project
Schedules · Plugins · Routines	Automate, extend, and chain the work end to end

THE WORKED SOLUTION

Do it — *step by step (1 of 2)*

A full pass — a founder building their OS, click by click.

1 Create the three Projects

DO THIS

- Claude sidebar → Projects → "+ New project" → name it "Work HQ".
- Repeat twice more for "Research" and "Studio".

Done when: three Projects show in your sidebar.

2 Write the Work HQ system prompt

DO THIS

- Open Work HQ → "Set instructions".
- Write it as Persona · Context · Rules · Never-do, tied to your weekly tasks (120–180 words).
- Use the full worked prompt in the "Your output" panel as your starting point.

Done when: a new chat in Work HQ answers in-role without you re-explaining.

Tip — change one line, re-run, and watch what shifts — that's how you learn what each line does.

3 Repeat for Research & Studio

DO THIS

- Research → persona: a rigorous analyst; rule: always cite; never: state opinion as fact.
- Studio → persona: a brand creative; rule: match my voice; never: go off-brand.

Done when: all three Projects carry a distinct system prompt.

THE WORKED SOLUTION

Do it — *step by step (2 of 2)*

4 Connect Notion into Research

DO THIS

- Customize → Connectors → Notion → Connect → approve in Notion's own window → grant least access.
- In a Research chat, toggle Notion on → "summarise my notes on [topic]."

Done when: Claude answers from your real Notion content.

Safety — Claude never sees your password, and it won't change anything without your yes.

5 Schedule a Monday Brief

DO THIS

- Sidebar → Scheduled → New task → set it up inside Work HQ.
- Prompt: "Summarise last week and give my top 3 priorities." Cadence: every Monday 8am.

Done when: the task appears in Scheduled with a next-run time.

6 Install a Plugin + build a 3-step Routine

DO THIS

- Install one Plugin from the directory (e.g. a content plugin) → enable it.
- Build a Routine that chains: research topic → draft post → save to Drive.
- Screenshot every piece for your hand-in.

Done when: the routine runs all three steps in order — your OS is live.

YOUR OUTPUT — the Work HQ system prompt

```
You are my Work HQ assistant.
Persona: a sharp chief-of-staff for a solo founder.
Context: I run [company]; I ship content, sales and ops myself.
Rules: draft in my voice; always cite sources; end with next actions.
Never: invent numbers, or send anything without my yes.
```

TOOL OVERVIEW

What you'll find *where*

Claude — the OS surfaces

Projects (left sidebar)	"+ New project" for Work, Research, Creative — each a reusable space
Set instructions	Each Project's system prompt — Persona · Context · Rules · Never-do
Connectors	Wire Notion or Drive into a Project so it reads your real docs
Scheduled tasks	A recurring task (e.g. a Monday brief) that runs itself
Plugins	Installable bundles of skills / connectors / commands
Routines	Chain 3+ steps into one repeatable flow

MAKE IT REUSABLE

Connect it *& automate it*

The build is worth more when it plugs into your real tools and runs itself. Here's exactly where to click.

CONNECT A CONNECTOR

Where: Customize → Connectors (or "+" in the message box → Connectors → Manage)

1. Pick the app from the directory — Google Drive, Gmail, Notion and more.
2. Click Connect and approve in the app's own sign-in window (OAuth).
3. Grant the least access it needs; you can turn it on per chat.
4. In a chat, toggle it on and ask Claude to use it.

For this project: Connect Notion into your Work Project so it drafts from your real notes and docs.

Claude never sees your password — and it never sends or changes anything until you say yes.

CREATE A SKILL

Where: Customize → Skills · in Cowork: "+" → Record a skill

1. Record: "+" → Record a skill → do the task once → Save — Claude writes the SKILL.md for you.
2. Or write it: a SKILL.md with a name, a one-line description (that's the trigger), and 5–8 rules.
3. Zip the folder (folder as the root) → Customize → Skills → Upload → enable.
4. Run it with /your-skill; edit and re-upload to improve it.

For this project: Save your best system-prompt recipe as /os-setup to spin up new Projects fast.

A Skill is a saved recipe Claude reloads every time — so you never re-explain.

MAKE A SCHEDULE

Where: Sidebar → Scheduled → New task (Create with Claude, or set up manually)

1. Set up the task once — the exact prompt it should run.
2. New task → paste the prompt and pick a cadence (e.g. Monday 9am, or one-off) + approval + folder.
3. Save — it runs in the cloud and messages you with the result.
4. Turn on automatic approval if it should run while you're away.

For this project: Schedule a Monday brief in your Work Project so the week starts itself.

Like a recurring alarm that does the work — not just one that rings.

PROMPT LIBRARY · STAR

Write it in *STAR*

STAR = Situation · Task · Action · Result. Same four parts every time — start at your level and add detail as you climb.

BASIC

- S **Situation.** I want Claude set up for my work.
- T **Task.** Make it act like a work assistant.
- A **Action.** Have it remember my role and priorities.
- R **Result.** Answers that fit my job.

INTERMEDIATE

- S **Situation.** I'm writing the system prompt for my Work Project.
- T **Task.** Draft a solid one.
- A **Action.** Cover who it is, my context, and a few rules.
- R **Result.** A copyable system prompt.

ADVANCED

- S **Situation.** Work Project — I'm a [role] doing [weekly tasks].
- T **Task.** Write a strong system prompt.
- A **Action.** Structure it Persona · Context · Rules · Never-do and tie it to my real tasks.
- R **Result.** A 150+ word prompt I can paste into Project instructions.

PRO

- S **Situation.** I run 3 Projects plus automations.
- T **Task.** Make them work as one OS.
- A **Action.** One system prompt per Project + a Routine that chains research → draft → schedule, with a connector feeding real data.
- R **Result.** A documented, running OS. (Save the recipe as /os-setup.)

WHY IT MATTERS

Where this pays off *in real life*

This isn't a toy exercise. The same build, pointed at real work, does this:

- Running your actual job on a configured AI, not ad-hoc chats
- A shared AI workspace for a small team
- Automating recurring ops (briefs, reports, follow-ups)
- A research hub that remembers your sources
- The base every later AI project plugs into

WHAT GREAT LOOKS LIKE

- Three Projects, each with a real, task-specific system prompt
- A connector that actually pulls your live data
- A Schedule that runs and a Routine that chains 3+ steps
