CLAUDE-FIRST FELLOWSHIP · WEEK 3

INSTRUCTIONS

The AI Media Kit

Direct AI to produce a full, on-brand media kit — images, a video, and a voice clip — that all look like one brand.

Week 3 · Claude · Image / Video / Audio AI · Canva

Your turning point in the AI era.

W3

The AI Media Kit

The brief — what you're building and why

WHAT YOU'LL BUILD

A complete AI-generated media kit for a brand or project: a hero image plus supporting images, a short video, and a voice or audio clip — all created with AI and assembled into one cohesive kit. The trick is a structured visual-prompt framework, so everything looks like it came from one brand, not five random tools.

- A hero image + 2–3 on-brand supporting images
- A short AI-generated video
- An AI voice or audio clip
- All assembled into one kit — built from a structured prompt

WHY IT MATTERS

Producing brand media used to need a team and a budget. Now one person can make a kit in an afternoon — if they can direct AI precisely. This build teaches structured visual prompting: the difference between random AI art and assets that actually look on-brand.

WHERE IT RUNS

Claude writes and refines the prompts; an image tool (Imagen 3 / DALL·E 3 / Firefly / Ideogram) makes the stills; a video tool (Kling / Runway / Pika) makes the clip; an audio tool (ElevenLabs / Suno) makes the voice or music; Canva or Figma assembles the kit.

WHEN TO BUILD & USE IT

Week 3 of the Fellowship — this is the Week 3 milestone (assignment). Build it for a real brand (yours or a project) and reuse the framework for any future asset.

HOW TO APPROACH IT

The method — *step by step*

These are the moves, not the answers. Work through them in order; the worked solution lives in the separate Solution guide.

1. Define the brand in a line or two: name, vibe, colours, and audience.
2. Write image prompts with the 8-part visual framework (Subject · Object · Environment · Situation · Reference · Colour · Motion · Geometry).
3. Generate a hero image + 2–3 supporting images in ONE image tool so the set stays consistent.
4. Turn one image or idea into a short video with a video tool.
5. Make a voice or audio clip — and only clone a voice you have consent to use.
6. Assemble everything in Canva or Figma into a finished media kit.

REQUIREMENTS

- 3+ on-brand images (one hero)
- 1 short video
- 1 audio or voice clip
- A structured prompt saved for each asset
- Everything assembled into one kit

HAND IN

A brand AI Media Kit — images + video + audio, assembled, with the prompts that made them.

A LITTLE HINT

Lock the “Reference” and “Colour style” parts of the framework and reuse them across every asset — that single habit is what makes a kit look like one brand.
