CLAUDE-FIRST FELLOWSHIP · WEEK 3

SOLUTION

The AI Media Kit

Direct AI to produce a full, on-brand media kit — images, a video, and a voice clip — that all look like one brand.

Week 3 · Claude · Image / Video / Audio AI · Canva

Reference build — yours can differ.

W3

The AI Media Kit

How it's executed

THE EXECUTION — HOW, WHERE & WHEN

You direct AI with a structured 8-part visual prompt instead of a vague sentence. First you define the brand, then write image prompts that share a fixed Reference and Colour style so the set is cohesive, and generate them in one tool. You animate one still into a short video, create a voice or music clip (with consent for any cloning), and composite everything in Canva or Figma. Claude writes and refines every prompt so the whole kit stays on-brand.

WHAT TOOLS — AND THEIR ROLE

Claude	Writes and refines the structured prompts for every asset
Image AI	Generates the hero + supporting images
Video AI	Turns a still or idea into a short clip
Audio AI	Creates the voice-over or music (with consent)
Canva / Figma	Assembles the assets into a finished kit

THE WORKED SOLUTION

Do it — *step by step (1 of 2)*

A full pass — a media kit for "Lumo", a calm focus app, step by step.

1 Write the brand brief

DO THIS

› In Claude, write two lines: the name, the vibe, the colours, and the audience.

PASTE THIS

```
"Brand: Lumo. Vibe: calm, focused. Colours: deep indigo + soft mint. Audience: students.
Hold these fixed for every asset."
```

Done when: you have a locked brief every asset will share.

2 Turn the brief into the 8-part image prompt

DO THIS

› Ask Claude to fill the 8-part framework and lock the Reference and Colour parts.

PASTE THIS

```
"Using my brief, write an 8-part image prompt (Subject · Object · Environment · Situation ·
Reference · Colour · Motion · Geometry). Keep Reference and Colour identical so a set stays
cohesive."
```

Done when: you have one filled 8-part prompt (see the "Your output" panel).

3 Generate the image set — in ONE tool

DO THIS

› Open one image tool (Firefly = commercial-safe; Ideogram = text-in-image).

› Paste the hero prompt; set 16:9. For 3 supporting images vary only Subject / Situation — keep Reference + Colour.

Done when: 1 hero + 3 supporting images that clearly belong together.

Tip — if one looks off, Colour or Reference usually drifted — re-lock them and regenerate.

THE WORKED SOLUTION

Do it — *step by step (2 of 2)*

4 Animate the hero into a short video

DO THIS

- Open a video tool (Kling / Runway / Pika) → image-to-video → upload the hero image.
- Motion note: "slow, gentle zoom; calm." Length: about 5 seconds.

Done when: a short clip that feels on-brand.

5 Make a voice or audio clip

DO THIS

- ElevenLabs → pick a voice → paste a 15-word tagline → generate. Or Suno for a short music sting.

Done when: a clean audio file for the kit.

Safety — only clone a real person's voice with their written consent.

6 Assemble the kit in Canva

DO THIS

- Canva → set up a Brand Kit (logo, fonts, colours) → new design.
- Drop in the hero, the supporting stills, a video frame, and note the VO → export a one-page kit.

Done when: everything sits in one on-brand layout — the kit is done.

YOUR OUTPUT — the filled 8-part image prompt

```
Subject: a student at a tidy desk, mid-focus
Object: a softly glowing Lumo app card
Environment: warm, minimal room, morning light
Situation: calm early-morning study
Reference: flat editorial illustration
Colour: deep indigo + soft mint
Motion: still
Geometry: centred, wide 16:9
```

TOOL OVERVIEW

What you'll find *where*

Image AI (Imagen 3 / Firefly / Ideogram)

Prompt box	Paste your 8-part prompt; set the aspect ratio
Style / reference	Lock a style or reference image so the set matches
Firefly note	Firefly is trained for commercial-safe use; Ideogram nails text-in-image

Video AI / Canva

Image-to-video	Feed a still + a motion note to animate it (Kling / Runway / Pika)
Canva Brand Kit	Load your logo, fonts and colours so every layout matches
Canva assemble	Drop images, video frame and captions into one kit layout

MAKE IT REUSABLE

Connect it *& automate it*

The build is worth more when it plugs into your real tools and runs itself. Here's exactly where to click.

CREATE A SKILL

Where: Customize → Skills · in Cowork: "+" → Record a skill

1. Record: "+" → Record a skill → do the task once → Save — Claude writes the SKILL.md for you.
2. Or write it: a SKILL.md with a name, a one-line description (that's the trigger), and 5–8 rules.
3. Zip the folder (folder as the root) → Customize → Skills → Upload → enable.
4. Run it with /your-skill; edit and re-upload to improve it.

For this project: Save the 8-part framework as /visual-prompt so every asset starts on-brand.

A Skill is a saved recipe Claude reloads every time — so you never re-explain.

CONNECT A CONNECTOR

Where: Customize → Connectors (or "+" in the message box → Connectors → Manage)

1. Pick the app from the directory — Google Drive, Gmail, Notion and more.
2. Click Connect and approve in the app's own sign-in window (OAuth).
3. Grant the least access it needs; you can turn it on per chat.
4. In a chat, toggle it on and ask Claude to use it.

For this project: Connect Google Drive so all kit assets and prompts live in one shared folder.

Claude never sees your password — and it never sends or changes anything until you say yes.

PROMPT LIBRARY · STAR

Write it in *STAR*

STAR = Situation · Task · Action · Result. Same four parts every time — start at your level and add detail as you climb.

BASIC

- S **Situation.** I need an image for my brand.
- T **Task.** Write me a prompt for it.
- A **Action.** Describe the vibe and subject.
- R **Result.** A prompt I can paste into an image tool.

INTERMEDIATE

- S **Situation.** Brand = [name, vibe, colours].
- T **Task.** Write an image prompt.
- A **Action.** Include subject, setting, style and colours.
- R **Result.** A ready-to-use image prompt.

ADVANCED

- S **Situation.** I need a cohesive set — a hero + 3 supporting images.
- T **Task.** Write prompts for all four.
- A **Action.** Use the 8-part framework (Subject · Object · Environment · Situation · Reference · Colour · Motion · Geometry) and lock Reference + Colour across all.
- R **Result.** Four prompts that share one look.

PRO

- S **Situation.** I produce media kits often.
- T **Task.** Build the whole kit from one brief.
- A **Action.** From my brand brief, output the image prompts (8-part), a video scene brief, and a voice script — all sharing the reference + colour.
- R **Result.** A full, on-brand prompt set. (Save as /media-kit.)

WHY IT MATTERS

Where this pays off *in real life*

This isn't a toy exercise. The same build, pointed at real work, does this:

- Launch assets for a brand or product
- A month of on-brand social content
- Pitch, marketing and ad visuals
- Client media kits delivered fast
- A consistent personal brand

WHAT GREAT LOOKS LIKE

- The whole set looks like one brand — shared reference + colour
- A working short video and a clean voice/audio clip
- Every prompt is saved, so the kit is repeatable
