WEEKLY ASSIGNMENT · WEEK 6

SHIP IT

Build it. Ship it. Demo it. Prove it.

The task

Build and present a real, working AI-powered product that solves a genuine problem. Claude must be **visible and central** — MCPs, Routines, or API calls live. Ship it, build a 5-slide Gamma deck, and demo it live in 5 minutes.

HOW TO DO IT

1. Pick your format — A Study Assistant, B Startup MVP, C Automation Service, or D Creative Platform.
2. Build from your Week 5 scope — use CLAUDE.md to keep Claude on track.
3. Make Claude visible — a live MCP call, a Routine, or API reasoning on screen.
4. Polish — error handling, loading, edge cases, MCP reliability, mobile.
5. Build the Gamma deck — Problem · Solution · Demo · Stack · Impact.
6. Demo live — 2-min deck + 3-min live; rehearse; submit a write-up.

HINTS

- Ship small and real — one working flow beats five half-built.
- The demo is the product — rehearse the happy path; it must not crash.
- Show Claude working — make a tool call visible; the AI is the point.
- Have a fallback — a recorded clip if the live demo fails.
- Write the deck last — once the product is real, the story writes itself.

YOUR CAPSTONE MUST HAVE

- [ ] A live, working product (web app, voice agent, agentic tool, or platform)
- [ ] Claude visible and central — MCPs, Routines, or API calls live
- [ ] A real user and a real problem it solves
- [ ] A 5-slide Gamma deck — Problem · Solution · Demo · Stack · Impact
- [ ] A 5-minute Demo Day presentation + a portfolio write-up

Submit — a live product + a 5-slide Gamma deck + your Demo Day presentation + a capstone write-up. **You're done when** it runs live without crashing, Claude's role is visible, and a stranger could use it and get value.
